

# ISO/TR 25398:2006-10 (E)

Earth-moving machinery - Guidelines for assessment of exposure to whole-body vibration of ride-on machines - Use of harmonized data measured by international institutes, organizations and manufacturers

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1 Scope .....		1
2 Normative references .....		1
3 Terms and definitions .....		2
4 Estimation of vibration magnitude .....		5
5 Estimation of daily exposure duration .....		5
6 Consideration of uncertainties .....		6
7 Determination and assessment of vibration exposure .....		7
8 Documentation .....		16
Annex A (informative) Machine types and their typical operating conditions .....		17
Annex B (informative) Equivalent vibration values of whole-body vibration emission of earth-moving machinery .....		21
Annex C (informative) Calculation form for total vibration exposure points .....		23
Annex D (informative) Example documentation form for whole-body vibration exposure .....		24
Annex E (informative) Guidelines for use and working conditions of earth-moving machinery to reduce vibration levels .....		25
Annex F (informative) Guidelines for establishing and reporting vibration reduction of earth-moving machinery .....		27
Bibliography .....		28
