

ISO/TR 25398:2006-10 (E)

Earth-moving machinery - Guidelines for assessment of exposure to whole-body vibration of ride-on machines - Use of harmonized data measured by international institutes, organizations and manufacturers

Contents		Page
Foreword		iv
Introduction		v
1 Scope		1
2 Normative references		1
3 Terms and definitions		2
4 Estimation of vibration magnitude		5
5 Estimation of daily exposure duration		5
6 Consideration of uncertainties		6
7 Determination and assessment of vibration exposure		7
8 Documentation		16
Annex A (informative) Machine types and their typical operating conditions		17
Annex B (informative) Equivalent vibration values of whole-body vibration emission of earth-moving machinery		21
Annex C (informative) Calculation form for total vibration exposure points		23
Annex D (informative) Example documentation form for whole-body vibration exposure		24
Annex E (informative) Guidelines for use and working conditions of earth-moving machinery to reduce vibration levels		25
Annex F (informative) Guidelines for establishing and reporting vibration reduction of earth-moving machinery		27
Bibliography		28
