DIN EN 13121-3:2016-10 (E)

GRP tanks and vessels for use above ground - Part 3: Design and workmanship

Contents

Page

European foreword 8

Introduction 9

1 Scope 10

2 Normative references 10

3 Terms and definitions 12

4 Symbols and abbreviations 13

5 Information and requirements to be supplied and documented 16
5.1 General 16
5.2 Information to be obtained by the manufacturer 16
5.3 Information to be prepared by the manufacturer 17
5.4 Final documentation 18

6 Material 18
6.1 General 18
6.2 Chemical protective barrier 18
6.2.1 General 18
6.2.2 Thermoplastics linings 18
6.2.3 Resin based linings 18
6.3 Flammability 18
6.4 Electrical resistivity 19

7 Mechanical properties 19
7.1 General 19
7.2 Heat deflection temperature 19
7.3 Laminate construction 19
7.4 Laminate thickness 21
7.5 Laminate properties 21
7.6 Inter-laminar shear strength 21
7.6.1 Laminate 21
7.6.2 Thermoplastics linings 21
7.7 Peel strength of laminates 22
7.8 Pull-off strength of laminates and thermoplastic liner 22
7.9 Selection of physical properties of materials and allowable design factors 22
7.9.1 General 22
7.9.2 Basic design 22
7.9.3 Advanced design 23
7.9.4 Design factors 24
7.9.5 Overall design factors K and F 24

8 Determination of design strain and loadings 27
8.1 General 27
8.2 Limit design strains 28
8.2.1 General 28
8.2.2 Limit resin strain ar 28
8.2.3 Limit strain for laminate or lamina lim 28
8.2.4 Limit test strain test 29

8.3 Limit design laminate loadings 29
8.4 Determination of the mechanical values from laminates 29
8.4.1 General 29
8.4.2 Calculation of laminate values without experimental test data 29
8.4.3 Laminate with experimental data 30
8.5 Laminate thickness 30

9 Design 30
9.1 Introduction 30
9.2 Determination of external loads 31
9.2.1 Snow loads 31
9.2.2 Wind loads 31
9.2.3 Seismic loads 32
9.2.4 Insulation loads 33
9.2.5 Loads resulting from connections 33
9.2.6 Agitation 34
9.2.7 Pressure due to inadequate venting 34
9.2.8 Personnel loading 34
9.2.9 Internal stresses in vessels and tanks due temperatures 34
9.3 Verification by the partial factor method 34
9.3.1 General 34
9.3.2 Dimensioning by using (A5)-factored loads 40
9.4 Drawings and design calculations 41
9.5 Design details 41
9.5.1 Design temperature TS 41
9.5.2 Pressure 41

10 Design analysis 42
10.1 Symbols and units 42
10.2 Vertical vessels or tanks, cylinders under loads (t < 0,01D) 44
10.2.1 Circumferential loadings 44
10.2.2 Combined axial loading 45
10.3 Cylindrical shells subject to compressive loadings -- critical buckling criteria 46
10.3.1 General 46
10.3.2 Critical axial buckling load 46
10.3.3 Critical circumferential buckling pressure 47
10.3.4 Combined axial and radial compressive loadings 48
10.3.5 Critical buckling pressure for cylindrical shell stiffened with external or internal rings.49
10.4 Conical shells 50
10.4.1 General requirements 50
10.4.2 Shallow conical ends 52
10.4.3 Conical ends subject to internal pressure 52
10.4.4 Conical ends subject to external pressure 54
10.4.5 Shell conical covers 56
10.5 Dished end 57
10.5.1 General requirements 57
10.5.2 Dished ends subject to internal pressure 58
10.5.3 Stability for dished ends subject to external pressure 59
10.6 Design of flat bottoms and skirts for vertical tanks and vessels 60
10.6.1 Definitions 60
10.6.2 Fully supported, flat bottom tanks 60
10.6.3 Vessels with flat bases subjected to pressure 67
10.6.4 Dished bottom and conical bottom configurations 67
10.7 Circumferential seams for cylindrical joints 77
10.7.1 General 77
10.7.2 Construction without thermoplastics liner 79
10.7.3 Construction with thermoplastics liner 79
10.8 Openings, branches and compensating laminate 79
10.8.1 General 79
10.8.2 Symbols 80

10.8.3 Compensation requirements for openings 80
10.8.4 Pull out load from nozzles 87
10.8.5 Prevention of failure in peel 87
10.8.6 Pad connections 87
10.8.7 Screwed connections 89
10.8.8 Access and inspecting openings 89
10.8.9 Gusset on branches 89
10.9 Flat Panels or Blind flanges 89
10.9.1 General 89
10.9.2 Symbols 90
10.9.3 Circular panels 90
10.10 Horizontal tanks and vessels 93
10.10.1 Types of supports 93
10.10.2 Symbols 95
10.10.3 Unit loads of the cylindrical shell 96
10.10.4 Unit loads on saddle position 103
10.10.5 Unit loads for horizontal loads at the vessel 109
10.11 Large diameter pipes and pipe fittings 110
10.11.1 General 110
10.11.2 Joints 111
10.11.3 Elbows 112
10.11.4 Large cut-outs and Tees 112

11 Bolted flange connections 115
11.1 General 115
11.2 Full face flanges design 121
11.2.1 General 121
11.2.2 Symbols 122
11.2.3 Pipe loads on flanges 124
11.2.4 Gasket load and bolt torque 124
11.2.5 Summary of loads 125
11.2.6 Total bending moment 125
11.2.7 Flange design 125
11.2.8 Flange slope 127
11.3 Stub flange design with backing ring 133
11.3.1 General 133
11.3.2 Loads, bending moment and design for backing ring made of steel or GRP 134
11.3.3 Stub flange loadings 135
11.3.4 Stub shear interface design 135
11.3.5 Stub end or flange design 135
11.3.6 Seating stress 136
11.4 Butt and strap jointed flanges at vessels or tanks 138

12 Supports for vessels and tanks 138
12.1 General 138
12.2 Supports and mountings for tanks and vessels 139
12.2.1 General considerations for supports 139
12.2.2 Supports for vertical vessels 139

13 Seismic loading 145

14 Design calculation for tank and vessel anchorage 145
14.1 General 145
14.2 Design for uplift 145
14.3 Design for anchor bolts 145

15 Structures and fittings 149
15.1 General 149
15.2 Internal structures and fittings 149
15.3 External structures and fittings 149
15.4 Lifting devices 149

16 Local load analysis 154

17 Quality Control 154
17.1 General 154
17.2 Works requirements 154
17.2.1 General 154
17.2.2 Raw materials storage 154
17.2.3 Manufacturing area 154
17.2.4 Conditions for laminating 154
17.3 Documentation to be prepared by the manufacturer 155
17.3.1 Technical documentation 155
17.3.2 Records and documentation requirements for raw materials 155
17.3.3 Manufacturing documentation requirements 156
17.3.4 Quality control documentation requirements 156
17.4 Manufacture 161
17.4.1 General 161
17.4.2 Fabrication of thermoplastics liners 162
17.4.3 Fabrication of laminates 162
17.4.4 Imperfections in laminates 163
17.4.5 Curing 163
17.5 Inspection and testing after completion of fabrication 163
17.5.1 Visual and dimensional inspection 163
17.5.2 Physical test to be carried out 164
17.5.3 Coupon testing 164
17.6 Experimental Design Verification Method for pressure vessel 165
17.6.1 General 165
17.6.2 Manufacture of the prototype vessel 165
17.6.3 Tests to be applied to prototype vessels 166

18 Marking 166

Annex A (informative) Product testing for serial or batch production process 168

A.1 Initial type testing (ITT) 168
A.2 Testing of samples 168
A.2.1 General 168
A.2.2 Batch release tests (BRT) 168
A.2.3 Process control tests 169
A.3 Inspection and test records 170
A.3.1 General 170
A.3.2 Marking 170
A.3.3 Delivery, installation, maintenance 170

Annex B (informative) Derivation of laminate properties from laminate properties 171

B.1 General 171
B.2 Lamina/laminate thickness 171
B.3 Laminate modulus 172
B.4 Determination of laminate flexural stiffness 173
B.5 Determination of laminate strains from load resultants 173

Annex C (normative) Pressure and leak testing 175

C.1 General 175
C.2 Open top tanks 175
C.3 Static head test of closed tanks and vessels 176
C.3.1 having a specific gravity up to 1,0 176
C.3.2 having a specific gravity greater than 1,0 176
C.4 Hydraulic pressure test 176
C.4.1 Test done in the working attitude 176

C.4.2 Tests done in other than the working attitudes 176
C.4.3 Pneumatic testing 177
C.4.4 Vacuum test 177

Annex D (normative) Methods of tests 178

D.1 General 178
D.1.1 Tests 178
D.1.2 Accuracy of test equipment 178
D.2 Loss on ignition 179
D.3 Tensile strength of thermoplastics welds 179
D.4 Bend test for thermoplastics welds 179
D.4.1 Introduction 179
D.4.2 Test arrangement 179
D.4.3 Test pieces 180
D.4.4 Method of test 180
D.4.5 Requirements from flexural test 180
D.4.6 Test report 180
D.5 Ultimate tensile unit strength of laminates 181
D.5.1 Test pieces and procedure 181
D.5.2 Simple laminates 181
D.5.3 Combined laminates 181
D.6 Unit tensile modulus of laminates 182
D.7 Inter laminar shear strength of laminates 184
D.7.1 Form of test specimen 184
D.7.2 Number of test specimens 184
D.7.3 Procedure 184
D.7.4 Results 184
D.7.5 Report 184
D.8 Lap shear strength of bond between thermoplastics lining and laminate or between laminates 185
D.8.1 Form of the test specimen 185
D.8.2 Number of test specimens 185
D.8.3 Procedure 185
D.8.4 Report 186
D.9 Peel strength of bond between laminate layers 186
D.9.1 Form of the specimen 186
D.9.2 Number of specimens 186
D.9.3 Procedure 187
D.9.4 Report 187
D.10 Flexural short-term creep test (flexural modulus E1h and E24h test) 189
D.10.1 General 189
D.10.2 Definitions 189
D.10.3 Test device 189
D.10.4 Test pieces 190
D.10.5 Procedure 190
D.10.6 Calculation 190
D.11 Barcol hardness 191
D.12 Determination of electrical resistivity 191
D.13 Glass transition temperature by DSC of cured resin 191
D.14 Spark testing of thermoplastics welds 191
D.14.1 General 191
D.14.2 Apparatus 192
D.14.3 Procedure 192
D.15 Long term flexural creep test 192
D.15.1 General 192
D.15.2 Definitions 192
D.15.3 Test device 192
D.15.4 Test pieces 193
D.15.5 Procedure 193

D.15.6 Calculation ... 193
D.16 Hardness of rubber ... 194
D.17 Flash point test ... 194
D.18 Heat deflection temperature test ... 194
D.19 Flexural strength of laminate ... 194
D.20 Pull-off strength from laminates ... 194

Annex E (normative) Approval testing of laminators ... 196

E.1 General ... 196
E.2 Assessment of the laminator ... 196
E.3 Procedure ... 196
E.4 Theory exam ... 197
E.5 Test pieces ... 197
E.6 Evaluation of test pieces ... 197
E.6.1 General ... 197
E.6.2 Test procedure 1 ... 198
E.6.3 Test procedure 2 ... 198
E.6.4 Test procedure 3 ... 198
E.7 Minimum requirements for acceptance ... 198
E.8 Test certificate ... 199
E.9 Validity and renewal ... 199
E.10 Range of approval ... 199

Annex F (informative) Design by stress analysis ... 201

F.1 General ... 201
F.2 Typical methods ... 201
F.3 General requirements ... 201
F.4 Important determination results ... 201
F.5 Design factors ... 201

Annex G (normative) Environmental aspects ... 202

G.1 Principle ... 202
G.2 Design and Manufacturing ... 202
G.3 Effects of materials on water ... 202
G.4 Effects of materials on food ... 203
G.5 Recycling ... 203
G.6 Storage of substances hazardous to water ... 203

Annex ZA (informative) Relationship between this European Standard and the essential requirements of Directive 2014/68/EU aimed to be covered ... 204

Bibliography ... 206
