DIN EN 14879-2:2007-02 (E)

Organic coating systems and linings for protection of industri al apparatus and plants against corrosion caused by aggressive media - Part 2: Coatings on metallic components

Contents

Page

Foreword 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 7

4 General 8
4.1 Selection criteria 8
4.1.1 General 8
4.1.2 Exposing media 8
4.1.3 Type and frequency of fluid loading 11
4.1.4 Thermal loading 11
4.1.5 Changes in temperature 11
4.1.6 Mechanical loading 12
4.1.7 Climatic influences 12
4.1.8 Additional requirements 12
4.2 Load profile 12
4.3 Requirements 12
4.3.1 Components 12
4.3.2 Coating materials 12
4.3.3 Coating system 13
4.3.4 Coated components 14

5 Coating systems 14
5.1 Laminate coating systems 14
5.1.1 Coating system design 14
5.1.2 Description of layers 15
5.1.3 General requirements 15
5.1.4 Coating process 17
5.1.5 Requirements for the coating system 19
5.2 Trowelled coating systems 20
5.2.1 Coating system design 20
5.2.2 Description of layers 21
5.2.3 General requirements 21
5.2.4 Coating process 22
5.2.5 Requirements for the coating system 24
5.3 Sprayed coating 26
5.3.1 Coating system design 26
5.3.2 Description of layers 26
5.3.3 General requirements 27
5.3.4 Application 28
5.3.5 Requirements for the coating system 29
5.4 Powder coating 31
5.4.1 Coating system design 31
5.4.2 Description of layers 32
5.4.3 Component design and surface condition 33
5.4.4 Coating materials 33

5.4.5 Ambient conditions 34
5.4.6 Surface preparation 34
5.4.7 Application 34
5.4.8 Requirements for the coating system 34
5.5 Protection of existent coatings 36
5.5.1 General 36
5.5.2 Packaging and handling 36
5.5.3 Storage 37
5.5.4 Assembly 37
5.5.5 Repair 37

6 Designation 38
6.1 Laminate coating 38
6.2 Trowelled coating 38
6.3 Sprayed coating 39
6.4 Powder coating 39

7 Testing 39
7.1 General 39
7.2 Suitability testing 39
7.3 Receiving inspection of coating material 40
7.3.1 General 40
7.3.2 Container marking 40
7.3.3 Viscosity or flow time 40
7.3.4 Density 40
7.3.5 Colour 40
7.3.6 Non-volatile matter content 40
7.3.7 Gel time 40
7.3.8 Binders 40
7.4 Testing of coating systems during application 40
7.4.1 General 40
7.4.2 Suitability of component for coating 40
7.4.3 Ambient conditions 41
7.4.4 Application method 41
7.4.5 Thickness of coating layers 41
7.5 Acceptance testing 41
7.5.1 General 41
7.5.2 Acceptance testing of coated component 41
7.5.3 Acceptance testing of specimens 41
7.6 Routine testing 42
7.7 Inspection report 42

8 Suitability verification and tests 42
8.1 Requirements 42
8.1.1 General 42
8.1.2 Laboratory testing 43
8.1.3 In-service testing (field tests) 45
8.1.4 Testing on reference objects 45
8.2 Tests 45
8.2.1 Sample bodies 45
8.2.2 Fluid load, resistance and tightness 45
8.2.3 Thermal loading 47
8.2.4 Temperature change loading 47
8.2.5 Adhesion strength 47
8.2.6 Ageing behaviour 47
8.2.7 Dissipation capability 48

Annex A (informative) Specimen form 49

Annex B (informative) Information to be given by the coating material manufacturer 50

Annex C (informative) Information to be given by the coating manufacturer 51

Annex D (informative) Resistance of resins to various chemicals at ambient temperature 52

Annex E (normative) Testing the dissipation capability 53

E.1 General 53
E.1.1 Dissipation resistance 53
E.1.2 Ground dissipating resistance 53
E.2 Testing the dissipation resistance of test samples 53
E.2.1 Instruments 53
E.2.2 Test procedure 53
E.2.3 Test report 53
E.3 Measuring the ground dissipation resistance on the laid surface protection system 54
E.3.1 Instruments 54
E.3.2 Preparation 54
E.3.3 Test procedure 54
E.3.4 Test report 55

Annex F (normative) Test fluid groups for verification of suitability for material/media combinations 56

Annex G (informative) Selection criteria for surface protection systems 58

G.1 Load profiles and suitable protection for gutters, trenches, pipes etc 58
G.2 Load profiles and suitable protection for containers 59

Annex H (informative) Sample form for acceptance inspection report 60

A-Deviation: National deviation due to regulations, the alteration of which is for the time being outside the competence of the CEN/CENELEC member 61
