

ISO 21243:2008-09 (E)

Radiation protection - Performance criteria for laboratories performing cytogenetic triage for assessment of mass casualties in radiological or nuclear emergencies - General principles and application to dicentric assay

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Abbreviated terms	4
5 Pre-planning	4
5.1 Awareness of the standard	4
5.2 Roles and responsibilities of health care facilities	4
5.3 Roles and responsibilities of the biodosimetry laboratories	5
6 Communication and information	5
6.1 Biological dosimetry request and confidentiality	5
6.2 Educational programme -- Formation, training and exercises	6
7 Biological dosimetry process in radiological or nuclear mass-casualty incidents	6
8 Emergency response of the reference laboratory	6
9 Design of laboratory network	7
9.1 Overview	7
9.2 Preparedness of the laboratory network	7
9.3 Laboratory network operation	8
10 Expected results	9
10.1 General	9
10.2 Whole-body exposure	9
10.3 Inhomogeneous exposure	10
11 Quality assurance and quality control	10
11.1 Overview	10
11.2 Quality control	10
Annex A (normative) Interactions between physicians and biological dosimetry laboratories	13
Annex B (informative) Initial contact information form	14
Annex C (informative) Guidance for threshold of detection	15
Annex D (informative) Estimates of dose and 95 % confidence limits for selected observations of numbers of dicentrics and cells	16
Annex E (informative) Instructions for customers	17

Annex F (informative) Example group sample report	18
Bibliography	20
