ISO 18310-1:2017-01 (E)

Measurement and prediction of the ambient dose equivalent from patients receiving iodine 131 administration aft er thyroid ablation - Part 1: During the hospitalization

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Measurement of ambient dose equivalent 3
4.1 General 3
4.2 Calibration of the ionization chamber in the reference radiation 3
4.3 Measurement of ambient dose equivalent 4
4.4 Examination of uncertainty elements 6

5 Mathematical model for a calibration of ionization chamber 6
5.1 General 6
5.2 Calibration coefficient of an ionization chamber in the reference radiation 7
5.3 Measurement of ambient dose equivalent rate using a calibrated ionization chamber in an 131I radiation field 7

6 Quality control 8

7 Uncertainty budget and estimation of uncertainty 8
7.1 Relative combined standard uncertainty 8
7.2 Relative combined standard uncertainty of uC [H*(10)] 9
7.3 Expanded uncertainty 9

Annex A (informative) Experimental application to this document: measurement and prediction of the ambient dose equivalent rate from patients receiving radioiodine 131 administration after thyroid ablation 11
