Foreword v

Introduction vi

1 Scope 1

2 Proposed classification/designation system 1

3 Summary of the designators for iron-base microstructures 1

4 Identification of iron-base alloy microstructural groups in a carbon/alloying elements diagram 2

5 Description of the iron-base alloys belonging to the different microstructure groups 4
5.1 General 4
5.2 Fe-FS Group (ferrite with second phase) 5
5.3 Fe-M1 Group (low-alloy martensite) 7
5.4 Fe-M2 Group (tool-steel martensite) 8
5.5 Fe-M3 Group (stainless-steel martensite) 10
5.6 Fe-M4 Group (maraging steel) 11
5.7 Fe-MA Group (martensite and austenite) 12
5.8 Fe-MK Group (martensite with alloy carbides) 13
5.9 Fe-MEK Group (martensite with eutectic) 15
5.10 Fe-A Group (nominally austenitic stainless steel) 17
5.11 Fe-AF Group (ferritic-austenitic stainless steel) 18
5.12 Fe-AM Group (austenitic manganese steel) 19
5.13 Fe-AMC Group (austenitic chromium-manganese steel) 20
5.14 Fe-AK Group (austenitic manganese steel containing alloy carbides) 21
5.15 Fe-PAE Group (primary austenite with eutectic) 22
5.16 Fe-NE Group (near eutectic) 23
5.17 Fe-PKE Group (primary carbides with eutectic) 24
5.18 Fe-KKA Group (primary carbides, alloy carbides and eutectic) 25

6 Summary of the designators for non-ferrous hardfacing deposit types 26

7 Description of the alloys belonging to the different non-ferrous microstructure groups and microstructural illustrations 27
7.1 Co-CS Group (cobalt solid-solution alloy) 27
7.2 Co-PC Group (primary cobalt solid-solution alloy with cobalt alloy/carbide eutectic) 28
7.3 Co-NE Group (near-eutectic mix of carbides and cobalt solid-solution alloy) 30
7.4 Co-PKE Group (primary carbides with eutectic) 32
7.5 Co-LP Group (cobalt solid-solution alloy with Laves phase particles) 33
7.6 Ni-NS Group (nickel alloy solid solution) 34
7.7 Ni-B Group (nickel borides) 35
7.8 Ni-CB Group (chromium borides in nickel alloy/boride eutectic) 36
7.9 Ni-LP Group (nickel-base alloy solid solution with Laves-phase particles) 37
7.10 Cu-BS Group (solid-solution bronzes) 38
7.11 Cu-BT Group (two-phase bronzes) 39
7.12 W-Fe Group (tungsten carbide in an iron matrix) 41
7.13 W-Ni Group (tungsten carbide in a nickel-base alloy matrix) 42

Annex A (informative) Types of wear and factors governing the severity of wear phenomena 43

Annex B (informative) General considerations on basic factors governing wear resistance 44

Annex C (informative) Abrasive-wear-resistance test methods 45

Annex D (informative) Practical guidance 48

Annex E (informative) Cross-references to national standards 51

Bibliography 53
