ISO/TR 26946:2011-11 (E)

Standard method for porosity measurement of thermally sprayed coatings

Contents

Page

Foreword iv

1 Scope 1

2 Purpose 1

3 Classification 1

4 Principle 1

5 Apparatus 2

6 Metallographic preparation 2
6.1 General 2
6.2 Sectioning 2
6.3 Cleaning 2
6.4 Mounting 3
6.5 Grinding and polishing 3

7 Metallography procedure 5

8 Presentation of porosity 6

9 Test report 6

Annex A (informative) List of t values with different n and values 8

Annex B (informative) Report of an international round robin test on the determination of porosity in plasma sprayed ceramic coatings by using image analysis of metallographically prepared cross sections 9

B.1 Introduction 9
B.2 Scheme of the round robin test 9
B.2.1 Participants 9
B.2.2 Sample preparation 9
B.2.3 Guideline of procedures for porosity measurement 10
B.3 Results and discussion 11
B.3.1 Initial results 11
B.3.2 Second round test carried out in Japan 12
B.4 Reassessment of the round robin tests by the grinding/polishing conditions 15
B.5 SEM imaging mode 19
B.6 Summary 19
