

# DIN EN ISO 9017:2013-12 (E)

## Destructive tests on welds in metallic materials - Fracture test (ISO 9017:2001)

| <b>Contents</b>       |   | <b>Page</b> |
|-----------------------|---|-------------|
| Foreword .....        |   | 3           |
| 1                     | Scope .....   | 4           |
| 2                     | Normative references .....                            | 4           |
| 3                     | Terms and definitions .....                           | 4           |
| 4                     | Principle .....                                       | 5           |
| 5                     | Symbols and abbreviated terms .....                   | 5           |
| 6                     | Dimensions of test pieces .....                       | 7           |
| 7                     | Removal of test specimens .....                       | 9           |
| 7.1                   | General .....   | 9           |
| 7.2                   | Marking .....   | 9           |
| 7.3                   | Extraction .....                                      | 9           |
| 7.4                   | Preparation .....                                     | 9           |
| 8                     | Test procedure .....                                  | 12          |
| 8.1                   | Butt welds .....                                      | 12          |
| 8.2                   | Fillet welds .....                                    | 14          |
| 8.3                   | Special recommendations for ductile weld metals ..... | 14          |
| 9                     | Test result .....                                     | 15          |
| 10                    | Test report .....                                     | 15          |
| Annex A (informative) | Example of a test report .....                        | 16          |
