Numerical welding simulation - Execution and documentation

Contents		Page
Foreword		v
1	Scope	1
2	Normative references	2
3	Terms and definitions	2
4	Description of the problem	3
4.1	General	3
4.2	Simulation object	4
4.3	Simulation objectives	4
4.4	Physical model	4
4.5	Mathematical model and solution method	5
4.6	Implementation	5
5	Workflow	5
5.1	General	5
5.2	Simplifications and assumptions	6
5.2.1	General	6
5.2.2	Material properties	6
5.2.3	Model scale and scope	6
5.2.4	Analysis coupling	6
5.3	Process description and parameters	7
5.4	Structure and weld geometries	7
5.5	Materials	7
5.5.1	General	7
5.5.2	Thermo-physical material properties	7
5.5.3	Thermo-mechanical material properties	7
5.6	Loads and boundary conditions	7
5.6.1	General	7
5.6.2	Thermal	7
5.6.3	Mechanical	8
5.7	Results review	8
5.8	Reporting	8
6	Validation and verification	8
6.1	General	8
6.2	Verification of the simulation model	8
6.3	Calibration of the model parameters	8
6.4	Plausibility check of the simulation results	9
6.5	Validation of the simulation results	9
6.5.1	General	9
6.5.2	Validation experiment guidelines	9
7	Reporting/display of results	9
7.1	General	9
7.2	Simulation object	9
7.3	Material properties and input data	10
7.4	Process parameter	10
7.5	Meshing	10
7.6	Numerical model parameters	10

7.7	Analysis of results	10
	Annex A (informative) Documentation template	11
	Annex B (informative) Modelling of heat transfer during welding	12
	Annex C (informative) Validation experiment guidelines	14
	Annex D (informative) Modelling of residual stresses	16
	Annex E (informative) Distortion prediction	17
	Bibliography	19
