ISO 14918:2018 (E)

Thermal spraying — Qualification testing of thermal sprayers

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Essential requirements for qualification testing

- 4.1 General
- 4.2 Equipment operation
- 4.3 Masking procedure
- 4.4 Surface preparation
- 4.5 Environmental conditions
- 4.6 Application equipment

5 Range of qualification

- 5.1 General
- 5.2 Thermal spraying processes
- 5.2.1 Grouping of thermal spraying processes
- 5.2.2 Application methods
- 5.2.3 Spray materials
- 5.2.3.1 General
- 5.2.3.2 Flame spraying (powder, wire, cords or rods)/arc spraying
- 5.2.3.3 Flame spraying (powder, wire, cords or rods, PTA, laser spraying and flame sprayed and fused)
- 5.2.3.4 Plasma spraying, plasma spraying in a chamber under vacuum
- 5.2.3.5 High velocity flame spraying
- 5.3 Qualification scope
- 5.4 Supervision
- 5.5 Shapes and dimensions of test pieces
- 5.6 Test methods
- 5.7 Acceptance requirements for test pieces
- 5.8 Spray consumables for the test

6 Examination and testing

- 6.1 General
- 6.2 Job knowledge test
- 6.3 Practical test

7 Re-tests

- 7.1 General
- 7.2 Additional tests

8 Period of validity

- 8.1 Initial qualification
- 8.2 Prolongation
- 8.2.1 Period
- 8.2.2 Thermal sprayer and production spraying
- 8.2.3 Interruption periods in thermal spray works
- 8.3 Requirements
- 8.4 Scheduling

8.5 Expired or cancelled qualification status

9 Records

10 Designation

Annex A (normative) Job knowledge

A.1 General
A.2 Requirements
A.2.1 General
A.2.2 Thermal spraying equipment
A.2.3 Thermal spraying process
A.2.4 Substrate materials and consumables
A.2.5 Safety and accident prevention
A.2.6 Methods of testing thermal sprayed coatings
A.3 Surface preparation during the qualification test
A.4 Other factors to be tested during the qualification test
A.4.1 Material storage
A.4.2 Masking procedure
A.4.3 Equipment operation
A.4.4 Application of the coating
A.4.5 Safety aspects concerning personal health, safe handling of the entire equipment and environmental safety requirements

Annex B (normative) Specific acceptance criteria

B.1 Zinc, aluminium and their alloys for corrosion protection/plastics
B.1.1 Instructions
B.1.2 Practical test
B.1.2.1 General
B.1.2.2 Test piece production
B.1.3 Testing of the sprayed coating
B.1.3.1 Thickness test
B.1.3.2 Coating quality
B.1.3.3 Adhesion test
B.2 Metal and alloys, metal based hard material (e.g. carbides), ceramics
B.2.1 Instructions
B.2.2 Test piece production
B.2.3 Testing of the sprayed coating
B.2.3.1 Thickness test
B.2.3.2 Coating quality
B.2.3.3 Machining test
B.2.3.4 Adhesion/shear load resistance test
B.2.3.5 Metallographic examination
B.3 Self fluxing alloys, cobalt based alloys, hard facings
B.3.1 Instructions
B.3.2 Test piece production
B.3.3 Testing of the sprayed and fused coating
B.3.3.1 Coating quality
B.3.3.2 Machining test
B.3.3.3 Metallographic examination
B.4 Summary of specific acceptance criteria
B.5 Test pieces

Annex C (normative) Minimum tensile adhesive strength and shear load resistance values

C.1 General information
C.2 Tensile adhesive strength according to ISO 14916

Annex D (informative) Example of qualification test certificate for thermal sprayer
