ISO 17657-2:2005-09 (E)

Resistance welding - Welding current measurement for resistance welding - Part 2: Welding current meter with current sensing coil

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Physical environment and operating conditions 2

5 Classification of welding current meters with their current sensing coil, and designation of product 2
5.1 Classes of welding current meter with current sensing coil 2
5.2 Designation of product 3

6 Requirements for welding current meter with current sensing coil 3
6.1 Welding current meter 3
6.2 Current sensing coil 3
6.3 Welding current meter with its current sensing coil 4
6.4 Integrator 4
6.5 Data processing unit 4
6.6 Display unit and output ports 4
6.7 Minimum and maximum duration of welding current 4
6.8 Maximum measuring current 5
6.9 Minimum measuring current 5
6.10 Phase-controlled current 5
6.11 Minimum time for current measurement 5
6.12 Fluctuation of supply voltage 5
6.13 Mechanical strength of current sensing coil 5
6.14 Setting position error of current sensing coil 5
6.15 Influence of ambient temperature 5
6.16 Test 6
6.16.1 Type test 6
6.16.2 Acceptance test 6

7 Test procedures 6
7.1 Maximum measuring current 6
7.2 Minimum measuring current 6
7.3 Phase-controlled current 7
7.4 Minimum time for current measurement 7
7.5 Fluctuation of supply voltage 7
7.6 Thermal test 8

8 Marking 8

Annex A (normative) Definition of indicated measuring time and its indicated current value 9

A.1 Indicated measuring time 9
A.2 Welding current value for the indicated measuring time 10

Annex B (informative) Set-up of a current sensing coil and construction of welding current meters 11
