DIN EN 16009:2011-10 (E)

Flameless explosion venting devices

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Requirements 5
4.1 General requirements 5
4.2 Flameless explosion venting system design 6

5 Types of flameless explosion venting devices 6

6 Testing of flameless explosion venting devices 7
6.1 General 7
6.2 Dust and gas characteristics 8
6.2.1 Dust for functional testing 8
6.2.2 Gases for functional testing 8
6.3 Functional testing 8
6.3.1 General 8
6.3.2 Volume of test vessel and Vmax, FV 8
6.3.3 Venting device and pstat 9
6.3.4 Explosion testing for mechanical integrity 9
6.3.5 Explosion testing for flame transmission 9
6.3.6 Venting efficiency of flameless explosion venting devices 9
6.4 External effects 9
6.5 Test report 10

7 Information for use 11

8 Marking 12

9 Packaging 12

Annex A (informative) Examples/types of flameless explosion venting devices 13

A.1 General 13
A.2 Ribbon type flame quenching element 13
A.3 Parallel plate type flame quenching element 14
A.4 Mesh or gauze type flame quenching element 14
A.5 Ceramic type flame quenching element 14

Annex B (informative) Flameless venting example 16

Annex C (informative) Flameless venting criteria 17

C.1 Nature of combustible dust, heat of combustion, flame temperature 17
C.2 Effect of flame quenching device blockage 18

Annex D (informative) Flameless venting - Pressurization of the surrounding volume 20

Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 94/9/EC 21
