

DIN EN 16009:2011-10 (E)

Flameless explosion venting devices

Contents		Page
Foreword		3
1	Scope	4
2	Normative references	4
3	Terms and definitions	4
4	Requirements	5
4.1	General requirements	5
4.2	Flameless explosion venting system design	6
5	Types of flameless explosion venting devices	6
6	Testing of flameless explosion venting devices	7
6.1	General	7
6.2	Dust and gas characteristics	8
6.2.1	Dust for functional testing	8
6.2.2	Gases for functional testing	8
6.3	Functional testing	8
6.3.1	General	8
6.3.2	Volume of test vessel and V_{max}, FV	8
6.3.3	Venting device and p_{stat}	9
6.3.4	Explosion testing for mechanical integrity	9
6.3.5	Explosion testing for flame transmission	9
6.3.6	Venting efficiency of flameless explosion venting devices	9
6.4	External effects	9
6.5	Test report	10
7	Information for use	11
8	Marking	12
9	Packaging	12
Annex A (informative) Examples/types of flameless explosion venting devices		13
A.1	General	13
A.2	Ribbon type flame quenching element	13
A.3	Parallel plate type flame quenching element	14
A.4	Mesh or gauze type flame quenching element	14
A.5	Ceramic type flame quenching element	14
Annex B (informative) Flameless venting example		16
Annex C (informative) Flameless venting criteria		17
C.1	Nature of combustible dust, heat of combustion, flame temperature	17
C.2	Effect of flame quenching device blockage	18
Annex D (informative) Flameless venting - Pressurization of the surrounding volume		20

Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 94/9/EC	21
Bibliography	22
