Foreword 4

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 7

4 Symbols and abbreviations 8
4.1 Symbols 8
4.1.1 Latin 8
4.1.2 Greek 10
4.2 Enumerating subscripts 10

5 Principle 10

6 Test method 11
6.1 General 11
6.2 Performance test of personal samplers for the inhalable aerosol fraction 11
6.3 Performance test of static samplers 11
6.4 Performance test of personal samplers for the respirable or thoracic aerosol fractions 11
6.5 Experiments required for the performance test 12
6.5.1 General 12
6.5.2 Candidate sampler bias 12
6.5.3 Candidate sampler variability 12
6.5.4 Excursion from the nominal flow rate 12
6.5.5 Collected mass or internally separated mass 13

7 Calculation of sampler bias and expanded uncertainty 14
7.1 Requirements 14
7.2 Correction factor 14
7.3 Calculation of concentration ratios 14
7.4 Sources of uncertainty (of measurement) 15
7.4.1 General 15
7.4.2 Workplace (test) aerosol concentration, as determined using the validated sampler(s) 15
7.4.3 Validated sampler 16
7.4.4 Candidate sampler bias 16
7.4.5 Individual candidate sampler variability 17
7.4.6 Excursion from the nominal flow rate 17
7.4.7 Collected mass or internally separated mass 18
7.5 Combined standard uncertainty 21
7.6 Expanded uncertainty 23

8 Periodic validation 23

9 Test report 23
9.1 General 23

9.2 Testing laboratory details and sponsoring organisation 24
9.3 Description of the candidate sampler and validated sampler 24
9.4 Critical review of sampling process 24
9.5 Circumstances of field experiment 24
9.6 Details of experimental design 24
9.7 Data analysis 25
9.8 Performance 25
9.9 Summary and information for the user 25

Annex A (normative) Procedure for a workplace comparison of a candidate sampler and a validated sampler in order to obtain a correction factor 26
