ISO 17734-1:2013-12 (E)

Determination of organonitrogen compounds in air using liquid chromatography and mass spec trometry - Part 1: Isocyanates using dibutylamine derivatives

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Principle 1

4 Reagents and materials 3

5 Preparation of standard solutions 3
5.1 Reference compounds 3
5.2 Di-n-butylamine (DBA) derivatives of isocyanates 4
5.3 DBA derivatives of bulk isocyanates 5
5.4 DBA derivatives of isocyanates in thermal decomposition products of polyurethane (PUR) or urea-based resins 6
5.5 Stability 6

6 Apparatus 6
6.2 Flow meter 8
6.3 Liquid chromatographic system 8
6.4 Ultrasonic bath 9
6.5 Evaporator 9

7 Air sampling 9
7.1 Pre-sampling laboratory preparation 9
7.2 Pre-sampling field preparations 9
7.3 Collection of air samples 10
7.4 Blanks 12
7.5 Raw material 12
7.6 Shipment of samples 12

8 Laboratory sample preparation 12
8.1 Sample sequence 12
8.2 Work-up procedure 12

9 Instrumental settings 13
9.1 HPLC program (LC-MS) 13
9.2 HPLC program [LC-chemiluminescent nitrogen detector (LC-CLND)] 13
9.3 Mass spectrometer 13

10 Data handling 14
10.1 Identification 14
10.2 Calibration curves 14
10.3 Quantification 14

11 Interferences 14

12 Determination of performance characteristics 14

12.1 General 14
12.2 Relevant uncertainty contributions and criteria 15
12.3 Assessment of performance characteristics (following the detailed approach in Reference [18]) 15

Annex A (informative) Performance characteristics 24

Annex B (informative) Examples 26

Annex C (informative) Commercially available products 31

Bibliography 32
