DIN EN 13205:2002-04 (E)

Workplace atmospheres - Assessment of performance of instruments for measurement of airborne particle concentrations

Contents

Page

Foreword ... **4**

Introduction ... **4**

1 Scope ... **5**

2 Normative references ... **5**

3 Terms and definitions ... **6**

4 Requirements ... **8**
4.1 Summary of requirements ... 8
4.2 Accuracy ... 8

5 Test methods ... **9**
5.1 Choice of laboratory tests to be used ... 9
5.2 Overview of test methods ... 10

6 Types of evaluation ... **10**

7 Instructions for use ... **11**

8 Marking, quality control ... **11**
8.1 Marking ... 11
8.2 Quality control ... 11

Annex A (normative) **Laboratory testing of samplers with respect to sampling conventions** ... **12**
A.1 Principle ... 12
A.2 Test method ... 12
A.2.1 General ... 12
A.2.1 Test conditions ... 12
A.2.2 Test variables ... 12
A.2.4 Experimental requirements ... 14
A.3 Calculation methods ... 16
A.3.2 Symbols and abbreviated terms ... 16
A.3.3 Determination of the sampling efficiency ... 17
A.3.4 Calculation of the sampled aerosol concentration. ... 17
A.3.5 Calculation of the ideal sampled aerosol concentration ... 17
A.3.6 Calculation of the sampler bias ... 17
A.3.7 Application of a sampler correction factor ... 18
A.3.8 Calculation of the uncertainty in the estimated sampler bias ... 18
A.3.9 Calculation of the sampler accuracy ... 18
A.4 Test report ... 19
A.4.1 Testing laboratory details and sponsoring organisation ... 19
A.4.2 Description of the tested sampler ... 19
A.4.3 Critical review of sampling process (see clause 5) ... 19
A.4.4 Laboratory methods used ... 19
A.4.5 Details of experimental design ... 20
A.4.6 Presentation of experimental results ... 20
A.4.7 Data analysis ... 20
A.4.8 Sampler performance ... 20

Annex B (normative) **Laboratory comparison of instruments** ... **23**
B.1 Principle ... 23
B.2 Test method ... 23
B.2.2 Test conditions ... 23
B.2.3 Test variables ... 24
B.2.4 Experimental requirements ... 26
B.3 Calculation methods ... 27
B.3.1 Symbols and abbreviated terms ... 27

B.3.2 Distribution of ratios 27
B.3.3 Correction factor 27
B.3.4 Accuracy 27
B.3.5 Temperature stability 28
B.3.6 Time stability 28
B.4 Test Report 28
B.4.1 Testing laboratory details and sponsoring organisation 28
B.4.2 Description of the candidate instrument and reference sampler 28
B.4.3 Critical review of sampling process (clause 5) 28
B.4.4 Test facilities 28
B.4.5 Details of experimental design 29
B.4.6 Data analysis 29
B.4.7 Candidate instrument performance 29
B.4.8 Summary and information for the user 29

Annex C (informative) **Recommended procedure for field comparison of instruments** **30**
C.1 Principle 30
C.2 Comparison procedure 30
C.2.2 Comparison of two types of personal instrument 31
C.2.3 Comparison of two types of static instrument 31
C.2.4 Periodic validation 31
C.3 Calculation methods 31
C.3.1 Symbols and abbreviated terms 31
C.3.2 Estimation of the correction function 31
C.3.3 Exclusion of outliers 32
C.3.4 Residual uncertainty after transformation by the correction function 32
C.3.5 Equivalence 32
C.4 Documentation 32
C.4.1 General 32
C.4.2 Description of the candidate instrument and reference sampler 32
C.4.3 Critical review of sampling process (clause 5) 33
C.4.4 Circumstances of field comparison 33
C.4.5 Details of experimental design 33
C.4.6 Data analysis 33
C.4.7 Equivalence 33

Annex D (normative) **Handling and transport test** **34**
D.1 Principle 34
D.2 Test procedure 34
D.2.1 General 34
D.2.2 Test equipment 34
D.2.3 Mounting of the samplers 34
D.2.4 Test particles and method of loading collection media 34
D.2.5 Test method 35
D.3 Calculation methods 35
D.4 Test Report 35
D.4.1 Testing laboratory details and sponsoring organisation 35
D.4.2 Description of candidate instrument and collection medium 35
D.4.3 Description of test methods and materials 36
D.4.4 Results 36
D.4.5 Summary 36

Annex E (normative) **Calculation of overall uncertainty** **37**
E.1 Principle 37
E.2 Definition of relative overall uncertainty 37
E.3 Combination of sampling and analytical bias 37
E.4 Combination of sampling and analytical precision 38

Annex F (informative) **Analysis of sampling efficiency data** **39**
F.1 Introduction 39
F.2 Example of a balanced experimental design 39
F.3 Analysis of efficiency data using the polygonal approximation method 39
F.3.1 Estimation of mean sampled concentration 39

F.3.2 Statistical model 40
F.4 Curve-fitting method 41
Bibliography 43
