

DIN 31000:1979-03 (E)

General Principles for the Safety Design of Technical Products

Contents

	Page		Page
1 Scope	2	5.8.3 Heat and cold	6
2 Purpose and application	3	5.8.4 Fluids occurring as a result of operation	6
3 Terms	3	5.8.5 Dust, vapors, gases	6
3.1 Technical products	3	5.9 Electric power	6
3.2 Hazards	3	5.9.1 Hazards due to the direct effects of electric power	6
3.3 Proper use	3	5.9.1.1 General	6
3.4 Safety practice measures	3	5.9.1.2 Protection against direct contact	7
3.5 Special safety practice aids	3	5.9.1.3 Protection in the event of indirect contact	7
3.6 Users	3	5.9.2 Hazards due to the intended effects of electric power on people and animals	7
3.7 Electrical engineering terms	4	5.9.3 Hazards due to the indirect effects of electric power	7
4 Principles of safety design	4	5.9.4 Hazards due to external effects on electrical industrial facilities	8
4.1 Aims of Safety practice	4	5.9.4.1 Effects from the environment	8
4.1.1 Safety practice through intrinsic design	4	5.9.4.2 Overload	8
4.1.2 Safety practice through intermediate means	4	5.9.5 Inscriptions and marking	8
4.1.3 Safety practice through instructions	4	5.9.6 Nominal operation	8
4.2 Special safety practice conditions	4	5.9.7 Other requirements	8
4.3 Special safety practice measures	5	5.9.7.1 Electrical connection and electrical junctions	8
4.4 Safety during manufacture	5	5.9.7.2 Air routes, leakage paths and distances	8
5 General principles and framework provisions	5	5.10 Pneumatic and hydraulic equipment	9
5.1 Stresses	5	5.11 Gas equipment for combustible gases	9
5.2 Materials	5	5.12 Equipment for liquid and solid fuels	9
5.2.1 General	5	5.13 Equipment for propellant energy	9
5.2.2 Harmful materials	5	5.14 Equipment for switching, controlling and regulating	9
5.2.3 Age-resistant materials	5	5.14.1 Controls and adjusting parts	9
5.2.4 Parts subject to the risk of corrosion	5	5.14.2 Danger circuits	9
5.2.5 Electrical insulation	5	5.14.3 Special safety circuits	10
5.3 Moving parts	5	5.15 Requirements placed on safe operation	10
5.4 Surfaces, corners and edges	6	5.16 Effectiveness of special safety practice aids	10
5.5 Safety when walking and standing, prevention of slipping	6	5.17 Electrostatic charge	10
5.6 Stability	6	5.18 Fuels and working substances	10
5.7 Design for transport	6	5.19 Ergonomic design	10
5.8 Hazards occurring during operation	6		
5.8.1 Ejected parts	6		
5.8.2 Noise and vibration	6
