# ISO 20552:2007-02 (E)

## Workplace air - Determination of mercury vapour - Method using gold-amalgam collection and analysi s by atomic absorption spectrometry or atomic fluorescence spectrometry

## Contents

Page

1 Scope ....1
2 Normative references ....2
3 Terms and definitions ....2
4 Principle ....4
5 Reactions ....4
6 Requirement ....5
7 Reagents ....5
8 Apparatus ....5
8.1 Sampling equipment ....5
8.2 Analytical instrumentation ....7
9 Occupational exposure assessment ....7
9.1 General ....7
9.2 Static (area) sampling ....7
9.3 Personal sampling ....7
9.4 Selection of measurement conditions and measurement pattern ....7
10 Sampling ....9
10.1 Preliminary considerations ....9
10.2 Preparation for sampling ....10
10.3 Sampling position ....11
10.4 Collection of samples ....11
10.5 Transportation of samples ....12
11 Analysis ....12
12 Expression of results ....13
12.1 Calculation of the air sample volumes ....13
12.2 Calculation of airborne mercury concentrations ....13
13 Method performance ....13
13.1 Detection and quantification limits ....13
13.2 Upper limits of the analytical range ....14
13.3 Blank values ....14
13.4 Bias and precision ....14
13.5 Effects on sampler performance ....14
13.6 Collection efficiency, breakthrough volume and sampling capacity of sorbent tubes ....14
13.7 Storage stability ....15
13.8 Interferences ....15
14 Test report ....15
Annex A (informative) Temperature and pressure correction .... 17
Annex B (informative) Figures .... 19
Bibliography .... 23
