

DIN EN 957-6:2011-02 (E)

Stationary training equipment - Part 6: Treadmills, additional specific safety requirements and test methods

Contents		Page
Foreword		4
Introduction		6
1	Scope	7
2	Normative references	7
3	Terms and definitions	7
4	Classification	8
5	Safety requirements	10
5.1	Squeeze and shear points within the accessible area	10
5.2	Transmission elements and rotating parts	10
5.3	Temperature rise	11
5.4	Safety stop	11
5.4.1	General	11
5.4.2	Characteristics	11
5.4.3	Actuator(s)	12
5.5	Immobilization method	12
5.6	Stability	12
5.7	Static loading	12
5.8	Endurance	12
5.9	Handrails	12
5.9.1	General	12
5.9.2	Treadmills with side handrails only	12
5.9.3	Treadmills with front handlebar and side handrails	13
5.10	Foot rails	13
5.11	Running surface	13
5.12	Acceleration	13
5.13	Heart rate control mode (if applicable)	14
5.14	Folding treadmills	14
5.15	Electrical safety	14
5.16	Additional classified requirements	14
5.17	Additional warning label	16
6	Test methods	16
6.1	Testing of transmission elements and rotation parts	16
6.2	Testing of temperature rise	16
6.3	Testing of the safety stop	16
6.4	Testing of the actuator(s)	16
6.5	Testing of immobilization method	17
6.6	Stability test	17
6.6.1	Test in training position	17
6.6.2	Test in folded position	17
6.7	Load testing	17
6.8	Testing of endurance	17
6.8.1	Requirement for the test apparatus	17
6.8.2	Test method	17
6.9	Testing of side handrails/front handlebar	18

6.10	Testing of foot rails	19
6.11	Testing of the running surface	19
6.12	Testing of the acceleration	19
6.13	Testing of the heart rate control mode	19
6.14	Testing of the folding treadmills	19
6.14.1	Testing of inadvertent release when packaged	19
6.14.2	For treadmill where the running surface is designed to be folded up when stored	19
6.14.3	For treadmill where the console is designed to be folded down when stored	19
6.14.4	Testing the maximum handling force	20
6.15	Testing of the accuracy of time, speed and distance	20
7	Test report	20
8	Additional instructions for use	21
	Bibliography	22
