

# DIN EN 1177:2024-10 (E)

## Impact attenuating playground surfacing - Methods of test for determination of impact attenuation (includes Amendment :2023)

---

<b>Contents</b>		<b>Page</b>
European foreword .....		4
Introduction .....		6
1	Scope .....	8
2	Normative references .....	8
3	Terms and definitions .....	8
4	Test apparatus .....	9
4.1	Suitability .....	9
4.2	Components of the apparatus .....	10
4.2.1	General .....	10
4.2.2	Headform .....	10
4.2.3	Signal conditioner (optional) .....	10
4.2.4	Guidance system .....	10
4.2.5	Fall height measuring equipment .....	11
4.2.6	Release system .....	11
4.2.7	Signal transmission system .....	11
4.2.8	Impact measuring equipment .....	11
4.3	Accuracy of apparatus .....	12
4.3.1	Calibration by a laboratory .....	12
4.3.2	Checks by operators .....	12
5	Testing procedure .....	13
5.1	Principle of impact measurement .....	13
5.1.1	General .....	13
5.1.2	Time/acceleration curve .....	13
5.1.3	Calculation of results .....	14
5.2	Selection and definition of test positions .....	14
5.3	!Testing onsite conditions .....	15
6	Test Method 1 - Determination of Critical Fall Height (CFH) .....	15
6.1	Principle .....	15
Table 1 -- HIC values .....		15
6.2	Testing in the laboratory .....	16
6.3	Testing on site .....	18
7	Test Method 2 - Determination of Impact Attenuation on site .....	19
7.1	Principle .....	19
7.2	Selection and recording of test positions .....	19
7.3	Carrying out the test .....	19
7.4	Results .....	20
8	Reports .....	20
8.1	General .....	20
8.2	Tests carried out in the laboratory with Method 1 .....	20
8.3	Tests carried out on site in accordance with Method 1 .....	21
8.4	Tests carried out on site in accordance with Method 2 .....	22

<b>Annex A (informative) Test rig for determination of impact attenuation .....</b>	<b>23</b>
<b>Figure A.1 -- Test rig for determination of critical fall height .....</b>	<b>23</b>
<b>Annex B (informative) Typical examples of trace of acceleration against time and curve of HIC and gmax values against drop height .....</b>	<b>24</b>
<b>Figure B.1 -- Typical trace of acceleration against time .....</b>	<b>24</b>
<b>Figure B.2 -- Example of typical curves from a test on rubber tiles for HIC and gmax values against drop height .....</b>	<b>25</b>
<b>Annex C (informative) Verification of computer algorithm used for the calculation of HIC (see 4.3.1.4) .....</b>	<b>26</b>
<b>Table C.1 -- Calculation of the output voltage for a 20 kHz frequency .....</b>	<b>26</b>
<b>Annex D (normative) Procedure for selection of test positions in playgrounds for Method 2 (see Clause 7) .....</b>	<b>27</b>
<b>D.1 Principle .....</b>	<b>27</b>
<b>D.2 Criteria for selection of test zones (3.12) .....</b>	<b>27</b>
<b>Table D.1 -- Example for test zones - Swings .....</b>	<b>28</b>
<b>Table D.2 -- Example for test zones - Slides and cableways .....</b>	<b>29</b>
<b>Table D.3 -- Example for test zones - Carousels .....</b>	<b>30</b>
<b>Table D.4 -- Example for test zones - Rocking equipment and spatial nets .....</b>	<b>30</b>
<b>Annex E (normative) Method for compaction of loose particulate impact attenuating material (see 6.2.4.5.1) .....</b>	<b>32</b>
<b>E.1 General .....</b>	<b>32</b>
<b>E.2 Measurement of layer thickness .....</b>	<b>32</b>
<b>E.3 Compaction procedure .....</b>	<b>32</b>
<b>Table E.1 -- Dimension of board sizes that can be used by different weight testers .....</b>	<b>33</b>
<b>Annex F (informative) Example of a regime for checking the function of an HIC test apparatus .....</b>	<b>34</b>
<b>Table F.1 -- Example of a regime for checking the correct function of an HIC test apparatus used weekly .....</b>	<b>34</b>
<b>Annex G (Informative) !History of HIC testing of impact attenuating surfaces for playgrounds and variations in test results .....</b>	<b>35</b>
