## Language resource management - Feature structures - Part 2: Feature system declaration

---

| <b>Contents</b>   |   | <b>Page</b> |
|---|---|-------------|
| Foreword .....  |   | iv          |
| Introduction .....  |   | v           |
| 1   | Scope .....   | 1           |
| 2   | Normative references .....                              | 1           |
| 3   | Terms and definitions .....                             | 2           |
| 4   | Overall structure .....                                 | 5           |
| 5   | Basic concepts .....                                    | 6           |
| 5.1   | Typed feature structures reviewed .....                 | 6           |
| 5.2   | Types .....   | 7           |
| 5.3   | Type inheritance hierarchies .....                      | 9           |
| 5.4   | Type constraints .....                                  | 11          |
| 5.5   | Optional (default) values and underspecification .....  | 12          |
| 5.6   | Subsumption .....                                       | 12          |
| 6   | Defining well-formedness versus validity .....          | 14          |
| 6.1   | Overview .....  | 14          |
| 7   | A feature system for a grammar .....                    | 19          |
| 7.1   | Overview .....  | 19          |
| 7.2   | Sample FSDs .....                                       | 20          |
| 8   | Declaration of a feature system .....                   | 23          |
| 8.1   | Overview .....  | 24          |
| 8.2   | Linking a text to feature system declarations .....     | 24          |
| 8.3   | Overall structure of a feature system declaration ..... | 25          |
| 8.4   | Feature declarations .....                              | 27          |
| 8.5   | Feature structure constraints .....                     | 33          |
| Annex A (normative) XML schema for feature structures ..... |   | 36          |
| Annex B (informative) A complete example .....              |   | 46          |
| Bibliography .....  |   | 50          |
