

ISO/IEC Guide 98-3 Supplement 1:2008-11 (E)

Uncertainty of measurement - Part 3: Guide to the expression of uncertainty in measurement (GUM:1995) - Supplement 1: Propagation of distributions using a Monte Carlo method

Contents		Page
Foreword		v
Introduction.....		vi
1 Scope		1
2 Normative references		2
3 Terms and definitions		2
4 Conventions and notation		6
5 Basic principles		8
5.1 Main stages of uncertainty evaluation		8
5.2 Propagation of distributions		9
5.3 Obtaining summary information		9
5.4 Implementations of the propagation of distributions		10
5.5 Reporting the results		11
5.6 GUM uncertainty framework		12
5.7 Conditions for valid application of the GUM uncertainty framework for linear models		13
5.8 Conditions for valid application of the GUM uncertainty framework for non-linear models		14
5.9 Monte Carlo approach to the propagation and summarizing stages		15
5.10 Conditions for the valid application of the described Monte Carlo method		16
5.11 Comparison of the GUM uncertainty framework and the described Monte Carlo method		17
6 Probability density functions for the input quantities.....		18
6.1 General		18
6.2 Bayes' theorem		19
6.3 Principle of maximum entropy		19
6.4 Probability density function assignment for some common circumstances		20
6.4.1 General		20
6.4.2 Rectangular distributions		20
6.4.3 Rectangular distributions with inexactly prescribed limits		20
6.4.4 Trapezoidal distributions		22
6.4.5 Triangular distributions		23
6.4.6 Arc sine (U-shaped) distributions.....		24
6.4.7 Gaussian distributions.....		25
6.4.8 Multivariate Gaussian distributions		25
6.4.9 <i>t</i> -distributions.....		26
6.4.10 Exponential distributions		28
6.4.11 Gamma distributions.....		28
6.5 Probability distributions from previous uncertainty calculations		29
7 Implementation of a Monte Carlo method.....		29
7.1 General		29
7.2 Number of Monte Carlo trials		29
7.3 Sampling from probability distributions		29
7.4 Evaluation of the model		30
7.5 Discrete representation of the distribution function for the output quantity.....		30
7.6 Estimate of the output quantity and the associated standard uncertainty		31
7.7 Coverage interval for the output quantity.....		31
7.8 Computation time		32
7.9 Adaptive Monte Carlo procedure.....		32
7.9.1 General		32
7.9.2 Numerical tolerance associated with a numerical value.....		32
7.9.3 Objective of adaptive procedure.....		33

7.9.4	Adaptive procedure	33
8	Validation of results	35
8.1	Validation of the GUM uncertainty framework using a Monte Carlo method	35
8.2	Obtaining results from a Monte Carlo method for validation purposes	35
9	Examples	36
9.1	Illustrations of aspects of this Supplement	36
9.2	Additive model	37
9.2.1	Formulation	37
9.2.2	Normally distributed input quantities	37
9.2.3	Rectangularly distributed input quantities with the same width	39
9.2.4	Rectangularly distributed input quantities with different widths	41
9.3	Mass calibration	42
9.3.1	Formulation	42
9.3.2	Propagation and summarizing	43
9.4	Comparison loss in microwave power meter calibration	45
9.4.1	Formulation	45
9.4.2	Propagation and summarizing: zero covariance.....	46
9.4.3	Propagation and summarizing: non-zero covariance.....	51
9.5	Gauge block calibration	53
9.5.1	Formulation: model	53
9.5.2	Formulation: assignment of PDFs	55
9.5.3	Propagation and summarizing	58
9.5.4	Results	59
	Annex A Historical perspective	61
	Annex B Sensitivity coefficients and uncertainty budgets	62
	Annex C Sampling from probability distributions.....	63
C.1	General.....	63
C.2	General distributions.....	63
C.3	Rectangular distribution	64
C.4	Gaussian distribution	65
C.5	Multivariate Gaussian distribution.....	66
C.6	<i>t</i> -distribution	67
	Annex D Continuous approximation to the distribution function for the output quantity.....	69
	Annex E Coverage interval for the four-fold convolution of a rectangular distribution	72
	Annex F Comparison loss problem	74
F.1	Expectation and standard deviation obtained analytically	74
F.2	Analytic solution for zero estimate of the voltage reflection coefficient having associated zero covariance.....	75
F.3	GUM uncertainty framework applied to the comparison loss problem	76
	Annex G Glossary of principal symbols.....	78
	Bibliography	83
	Alphabetical index	86
