

DIN EN 12485:2010-08 (E)

Chemicals used for treatment of water intended for human consumption - Calcium carbonate, high-calcium lime, half-burnt dolomite, magnesium oxide and calcium magnesium carbonate - Test methods

Contents

Foreword.....	3
1 Scope	4
2 Normative references	4
3 General requirements.....	4
3.1 Number of determinations	4
3.2 Methods for analysis	4
3.3 Sample preparation	6
3.4 Reagents	6
3.5 Glassware	7
3.6 Expression of results	7
3.7 Repeatability and reproducibility limits	8
3.8 Test report	8
4 Determination of screen oversize of high-calcium lime	8
4.1 Air-jet sieving method	8
4.2 Wet sieving method	10
5 Preparation of test solutions	12
5.1 Fusion with lithium tetraborate	12
5.2 Extraction with hydrochloric acid	13
5.3 Microwave digestion with nitric acid	14
5.4 Pressurized digestion with nitric acid	14
6 Conventional methods of determining major and minor constituents	15
6.1 Determination of free water	15
6.2 Loss on ignition at 450 °C	16
6.3 Determination of carbon dioxide.....	17
6.4 Determination of residue insoluble in hydrochloric acid	18
6.5 Determination of content of water soluble calcium oxide or calcium hydroxide (reference method).....	19
6.6 Determination of sugar soluble calcium oxide or calcium hydroxide (alternative method).....	21
6.7 Water-insoluble matter	23
6.8 Determination of free CaO	24
6.9 Determination of calcium oxide and magnesium oxide	25
6.10 Determination of sulfate.....	28
6.11 Determination of solubility index by conductivity	29
6.12 Calculation of the composition of a commercial product	32
7 Determination of constituents by modern techniques	34
7.1 Determination of minor constituents by AAS flame technique	34
7.2 Determination of major and minor constituents by ICP-OES	38
8 Determination of trace elements	43
8.1 Determination of lead, cadmium, chromium and nickel by AAS graphite tube technique	43
8.2 Determination of lead, cadmium, chromium and nickel by ICP-OES.....	49
8.3 Determination of arsenic, antimony and selenium by AAS hydride technique	53
8.4 Determination of mercury by cold-vapour technique	56
Annex A (informative) Analytical scheme.....	60
Annex B (informative) Table B.1: Precision data for the test methods	66
Bibliography	67
