ISO 15769:2010-04 (E)

Hydrometry - Guidelines for the application of acoustic velocity meters using the Doppler and echo correlation meth ods

Contents

Page

Foreword v

1 Scope 1

2 Normative references 1

3 Terms, definitions and abbreviated terms 1
3.1 Terms and definitions 1
3.2 Abbreviated terms 3

4 Principles of operation of the techniques 3
4.1 Ultrasonic Doppler 3
4.2 Operating techniques 5
4.3 Bed-mounted Doppler systems 6
4.4 Side-looking/horizontal ADCPs 6
4.5 Acoustic (echo) correlation method 8
4.6 Velocity-index ratings 11

5 Factors affecting operation and accuracy 11
5.1 General 11
5.2 Characteristics of the instrument 11
5.3 Channel and water characteristics 16
5.4 Effect of weed 20

6 Site selection 20
6.1 General 20
6.2 General site requirements for Dopplers and echo correlation devices 20
6.3 Bed-mounted ultrasonic Doppler and echo correlation devices 21
6.4 Side-lookers 22

7 Measurements 22
7.1 Velocity 22
7.2 Water level 23
7.3 Determination of cross-sectional area 23

8 Installation, operation and maintenance 23
8.1 Installation considerations 23
8.2 General maintenance considerations 25

9 Calibration, evaluation and verification 26
9.1 General 26
9.2 Calibration and performance checking 26

10 Determination of discharge 27
10.1 General 27
10.2 Velocity-index ratings 28

11 Uncertainties in discharge determinations 32
11.1 General 32
11.2 Definition of uncertainty 32
11.3 General expectations of performance 33

11.4 Methodology of estimating the uncertainty in discharge determination 33

12 Points to consider when selecting equipment 38

Annex A (informative) Selection considerations for ultrasonic Doppler and echo correlation devices 39

Annex B (informative) Practical considerations 41

Annex C (informative) Introduction to measurement uncertainty 45

Annex D (informative) Performance guide for hydrometric equipment for use in technical standards 53

Annex E (informative) Sample questionnaire -- Doppler- and echo-correlation-based flowmeters 56

Bibliography 61
