

DIN EN 14154-3:2011-06 (E)

Water meters - Part 3: Test methods and equipment (includes Amendment A2:2011)

Contents		Page
Foreword		5
1	Scope	6
2	Normative references	6
3	Reference conditions	7
4	Administrative and external examination for approval programme	7
5	Performance tests for approval programme	8
5.1	General requirements for the test installation	8
5.1.1	Location	8
5.1.2	Test water	9
5.1.3	Calibrated reference device	9
5.1.4	Freedom from spurious influences	9
5.1.5	Group testing of meters	10
5.2	Static pressure test	10
5.2.1	Object of test	10
5.2.2	Preparation	10
5.2.3	Test procedure	10
5.2.4	Acceptance criteria	11
5.3	Determination of intrinsic errors (of indication)	11
5.3.1	Object of test	11
5.3.2	Preparation	11
5.3.3	Test procedure	12
5.3.4	Acceptance criteria	12
5.4	Error (of indication) tests	13
5.4.1	Object of test	13
5.4.2	Preparation	13
5.4.3	Test Procedure	13
5.4.4	Acceptance criteria	13
5.4.5	#Interchange test on all types of cartridge and meters with exchangeable metrological units\$	13
5.5	Absence of flow test	14
5.5.1	Object of test	14
5.5.2	Preparation	14
5.5.3	Test procedure	14
5.5.4	Acceptance criteria	14
5.6	Water temperature test (within ROC)	14
5.6.1	Object of test	14
5.6.2	Preparation	14
5.6.3	Test procedure	14
5.6.4	Acceptance criteria	15
5.7	Overload water temperature test	15
5.7.1	Object of test	15
5.7.2	Preparation	15
5.7.3	Test procedure	15
5.7.4	Acceptance criteria	15
5.8	Water pressure test	15
5.8.1	Object of test	15
5.8.2	Preparation	16

5.8.3	Test procedure	16
5.8.4	Acceptance criteria	16
5.9	Verification of flow profile sensitivity classes	16
5.9.1	Object of test	16
5.9.2	Preparation	16
5.9.3	Test procedure	16
5.9.4	Acceptance criteria	17
5.10	Tests on ancillary devices of a water meter	19
5.10.1	Object of test	19
5.10.2	Preparation	19
5.10.3	Procedure	19
5.10.4	Acceptance criteria	19
5.11	Pressure loss test	19
5.11.1	Object of test	19
5.11.2	Preparation	19
5.11.3	Test procedure	20
5.11.4	Acceptance criteria	20
5.12	Reverse flow test	20
5.12.1	Meters designed to measure reverse flows	20
5.12.2	Meters not designed to measure reverse flows	20
5.13	Endurance tests	21
5.13.1	Continuous flow test	21
5.13.2	Discontinuous flow test	24
6	Performance tests related to influence quantities	27
6.1	General requirements	27
6.1.1	Environmental classification	27
6.1.2	Electromagnetic environments	27
6.1.3	Reference conditions	27
6.1.4	Test volumes for measuring error (of indication) of a water meter	28
6.1.5	Influence of the water temperature	28
6.1.6	Requirements for environmental tests	28
6.1.7	Equipment under test (EUT)	28
6.2	Climatic and mechanical environment	30
6.2.1	Dry heat (non-condensing)	30
6.2.2	Cold	31
6.2.3	Damp heat, cyclic (condensing)	32
6.2.4	Vibration (random)	34
6.2.5	Mechanical shock	35
6.3	Electromagnetic environment	36
6.3.1	Electrostatic discharge	36
6.3.2	Radiated radio frequency/Electromagnetic fields	37
6.4	Power supply	39
6.4.1	A.C. power voltage variation	39
6.4.2	A.C. voltage dips and short interruptions	40
6.4.3	Surge immunity	42
6.4.4	Electrical fast transients/Burst	43
6.4.5	D.C. power voltage variation	44
6.5	Static magnetic field	46
6.5.1	Object of test	46
6.5.2	Preparation	46
6.5.3	Test procedure	46
6.5.4	Acceptance criteria	46
6.6	Interruption in battery supply	47
6.6.1	Object of test	47
6.6.2	Test procedure	47
6.6.3	Acceptance criteria	47
Annex A (normative)	Irregularity in water velocity field	48
A.1	Irregularity in water velocity field	48
A.2	Flow disturbers	48

Annex B (informative) Examples of methods and components used for testing Concentric Water Meters	59
Annex C (normative) Equipment and method used to determine meter error	63
C.1 Principle	63
C.2 Description of the test rig	63
C.3 Pipe-work	63
C.3.1 Description	63
C.3.2 Test section	64
C.3.3 Precautions to be taken during tests	64
C.3.4 Special arrangements for the installation of meters	64
C.3.5 Cyclic distortion of the meter	66
C.3.6 Major factors affecting the measurement of errors of indication	67
Annex D (informative) Equipment and methods for pressure loss test	68
D.1 Principle	68
D.2 Pressure loss test equipment	68
D.2.1 General	68
D.2.2 Measuring section	68
D.3 Test procedure	73
D.3.1 Determination of pressure loss attributable to pipe lengths for water meters (measurement 1)73 D.3.2 Measurement and calculation of the actual P of a water meter (measurement 2)	74
Annex E (informative) Characteristics of reference devices	75
E.1 General	75
E.2 Types of reference devices	75
E.2.1 Calibration using volumetric vessels	75
E.2.2 Calibration using reference meters (master meters)	76
E.2.3 Calibration using calibrated tubes	77
E.2.4 Calibration by weighing method	78
E.2.5 Other calibration methods	78
Annex ZA (informative) "Relationship between this European Standard and the Essential Requirements of EU Directive 22/2004/EC on Measuring Instruments"	79
Bibliography	86
