ISO 10930:2012-05 (E)

Soil quality - Measurement of the stability of soil aggregates subjected to the action of water

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Reagent and equipment required for stability tests 1

5 Procedures 3
5.1 General 3
5.2 Field sampling 3
5.3 Preparation of the soil sample 3
5.4 Treatment methods 4
5.5 Measurement of the size distribution of the remaining aggregates 5

6 Calculation 6
6.1 General 6
6.2 Corrected MWD for soils with gravels 6

7 Additional treatment for dispersible soils 6

8 Interpretation of the results 6

9 Test report 8

Annex A (informative) Flow diagram of the measurement of aggregate stability 9

Annex B (informative) Examples of the presentation of the test results on the same sample 10

Annex C (informative) Sensitivity and repeatability test of the method for seven operators on a reference sample 12
