Foreword 6

Introduction 7

1 Scope 9

2 Normative references 9

3 Terms and definitions 10

4 Influence of materials on water for human consumption - Enhancement of microbial growth (EMG) - Method 1: Measured by Biomass Production Potential (BPP) measured by ATP 11
4.1 General 11
4.2 Principle 12
4.3 Apparatus 12
4.3.1 Requirements 12
4.3.2 Vessels, containers, stoppers and connectors and general laboratory apparatus 12
4.3.3 Cleaning 12
4.3.4 Gloves 12
4.3.5 Plates 12
4.3.6 Test containers 13
4.3.7 Test tubes 13
4.3.8 Incubator (or hot room) 13
4.3.9 Sterilisation ovens 13
4.3.10 Membrane filters 13
4.3.11 Autoclave 13
4.4 Reagents 13
4.4.1 Test water 13
4.4.2 Dilution water 14
4.4.3 Potassium dihydrogen orthophosphate solution 14
4.4.4 Potassium-nitrate solution 14
4.4.5 Sodium acetate solution 15
4.4.6 Inoculum 15
4.4.7 Specifications for controls 15
4.5 Test samples and controls 16
4.5.1 Sampling, transport and storage of test samples 16
4.5.2 Test piece preparation 16
4.6 Pre-treatment of test pieces 17
4.6.1 General 17
4.6.2 Flushing 17
4.6.3 Stagnation 17
4.6.4 Prewashing 17
4.7 Test procedure 17
4.7.1 Overview 17
4.7.2 ATP contamination 18
4.7.3 Preparation of the test container 18
4.7.4 Test pieces 18
4.7.5 Incubation 18
4.7.6 Positive and negative controls 18
4.7.7 Changing of test water 19

4.7.8 Measurement of ATP concentrations 19
4.8 Calculation of test results 19
4.8.1 Biomass Production (BP) 19
4.9 Reproducibility and repeatability 22
4.10 Test report 22
4.10.1 General 22
4.10.2 Material/Product information 22
4.10.3 Information on the test procedure 23
4.10.4 Test results 23

5 Influence of materials on water for human consumption - Enhancement of microbial growth (EMG) - Method 2: Measured by biofilm volume 23
5.1 General 23
5.2 Principle 24
5.3 Basic requirements 24
5.4 Apparatus and reagents 24
5.4.1 Disinfectant 24
5.4.2 Test water 24
5.4.3 Specifications for controls 25
5.4.4 Test container and test module for pipes and hoses 25
5.4.5 Scraper 25
5.4.6 Centrifuge 25
5.4.7 Glassware for centrifugation 25
5.4.8 Flowmeter 25
5.5 Test samples and test pieces 25
5.5.1 Sampling, transport and storage 25
5.5.2 Preparation of test pieces 26
5.6 Test procedure 27
5.6.1 General 27
5.6.2 Test procedure in test container 27
5.6.3 Test procedure in test module for pipes and hoses 27
5.6.4 Preparation of the test container or test module for pipes and hoses 28
5.6.5 Pre-treatment of test pieces 28
5.6.6 Removal of test pieces 28
5.6.7 Examination of test pieces 28
5.6.8 Re-exposure after harvesting 28
5.6.9 Centrifugation and determination of biofilm 28
5.6.10 Examination of biofilm 29
5.6.11 Test periods 29
5.7 Calculation of test results 30
5.8 Evaluation of satisfactory test performance 31
5.9 Test report 32
5.9.1 General 32
5.9.2 Material/Product information 32
5.9.3 Information on the test procedure 33
5.9.4 Test results 33

6 Influence of materials on water for human consumption - Enhancement of microbial growth (EMG) - Method 3: Measured by mean dissolved oxygen depletion 34
6.1 General 34
6.2 Principle 34
6.3 Test premises 34
6.3.1 General 34
6.3.2 Safety 34
6.4 Apparatus and reagents 34
6.4.1 General 34
6.4.2 Inoculum water 34
6.4.3 Test water 35
6.4.4 Test containers 36
6.4.5 Dissolved oxygen meter 37
6.4.6 30 °C Incubator/chamber 37
6.4.7 Polyethylene bags 37

6.4.8 Glass plates 37
6.4.9 Brass couplings 37
6.4.10 Special glass plates 37
6.5 Preparation of test pieces 37
6.5.1 General 37
6.5.2 Nature of test pieces 37
6.6 Test piece and test container size 37
6.6.1 General 37
6.6.2 Test sample storage 38
6.6.3 Special requirements 38
6.6.4 Specifications for controls 42
6.6.5 Test water control 42
6.7 Test procedures 42
6.7.1 Preparation of the test container 42
6.7.2 Incubation 43
6.7.3 Changing the test water 43
6.7.4 Measurement of dissolved oxygen 43
6.8 Calculation of results 44
6.8.1 Calculation of the mean dissolved oxygen difference (MDOD) 44
6.8.2 Validation of results 44
6.8.3 Repeatability and reproducibility 45
6.9 Test report 45
6.9.1 General 45
6.9.2 Material/Product information 45
6.9.3 Information on the test procedure 47
6.9.4 Results 47

Annex A (normative) Method 1: Measured by Biomass Production Potential (BPP) measured by ATP - Assessment of the suitability of test water for its use in the BPP test (biological stability and the need for addition of trace elements) 48

Annex B (normative) Method 1: Measured by Biomass Production Potential (BPP) measured by ATP - Protocol of ATP analysis 50

B.1 Introduction 50
B.2 Apparatus and glassware 50
B.3 Reagents and auxiliary substances 50
B.3.1 General 50
B.3.2 Sterile water 50
B.3.3 ATP solutions for standard dilutions and calibration curves 50
B.3.4 Luciferin/luciferase (enzyme) solution 51
B.3.5 ATP extraction reagent 52
B.4 Sampling 52
B.5 Procedure 52
B.5.1 General 52
B.5.2 Blank water 52
B.5.3 Control dilutions 52
B.5.4 Samples 52
B.6 Expression of results 52
B.6.1 Water samples 52
B.6.2 Material samples 53
B.7 Test record 53
B.8 Quality control of calibration curves 53

Annex C (informative) Method 1: Measured by Biomass Production Potential (BPP) measured by ATP - ATP and its measurement 55

Annex D (informative) Method 1: Measured by Biomass Production Potential (BPP) measured by ATP - Evaluating procedures for removal of attached biomass 56

D.1 Introduction 56
D.2 Procedures for removal of Attached Biomass 56

D.2.1 General 56
D.2.2 Swabbing 56
D.2.3 Low energy sonication (LES) 56
D.2.4 High energy sonication (HES) 56
D.3 Effectiveness of removal procedure 57

Annex E (informative) Method 1: Measured by Biomass Production Potential (BPP) measured by ATP 58

Annex F (informative) Method 2: Measured by biofilm volume 59

Annex G (informative) Method 2: Measured by biofilm volume 60

Annex H (informative) Method 3: Measured by mean dissolved oxygen depletion 63
