ISO 11657:2014-07 (E)

Hydrometry - Suspended sediment in streams and canals - Determination of concentration by surrogate techniques

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Measuring principles 2
4.1 Transmission 2
4.2 Scattering 2
4.3 Transmission -- Scattering 3
4.4 Diffraction 3

5 Properties of sediment of importance for sediment surrogate techniques 3
5.1 General 3
5.2 Particle size 4
5.3 Particle colour 4

6 Methods for determination of suspended sediment concentration by surrogate techniques 4
6.1 General 4
6.2 Bulk optics 4
6.3 Laser diffraction (LD) 5
6.4 Acoustic back scatter (ABS) 5

7 Calibration and validation 6

Annex A (informative) Determination of the concentration of suspended sediment by optical techniques 9

Annex B (informative) Determination of the concentration of suspended sediment by laser diffraction technique 12

Annex C (informative) Determination of the concentration of suspended sediment by acoustic back scatter 14
