

DIN EN 16695:2015-12 (E)

Water quality - Guidance on the estimation of phytoplankton biovolume

Contents		Page
European foreword		3
Introduction		4
1 Scope		5
2 Normative references		5
3 Terms and definitions		5
4 Principle		5
5 Equipment and preservatives		6
6 Procedure		7
6.1 Sampling and sample preparation		7
6.2 Calibration of the eyepiece micrometre, counting-graticule and image analysis software ...		7
6.3 Statistical requirements for determination		8
6.4 Measurement		9
6.4.1 General		9
6.4.2 Using size classes based on representative measurements		10
6.4.3 How to deal with hidden dimensions		10
6.4.4 Measurement of filamentous taxa		10
6.4.5 Measurement and counting of colony- and coenobium-forming taxa		11
6.4.6 Measurement of complex geometrical shapes		12
6.5 Calculation of biovolume		12
6.6 Biovolume biomass relations		13
6.7 Reporting		13
7 Quality Assurance		13
Annex A (informative) List of geometrical shapes		14
Annex B (informative) Performance data		23
Annex C (informative) Carbon content calculation		28
Annex D (informative) Alphabetical list of recommended geometrical shapes and hidden dimension factors		30
Annex E (informative) Example: Genus-specific instruction for measurement of dimensions		96
Bibliography		99
