ISO/TR 21414:2016-02 (E)

Hydrometry - Groundwater - Surface geophysical surveys for hydrogeological purposes

Contents

Page

Foreword vi

Introduction vii

1 Scope 1

2 Termsanddefinitions 1

3 Units of measurement 5

4 Purpose of geophysical survey 5

5 Planning 6
5.1 General considerations 6
5.2 Access to the area 6
5.3 Equipment 6
5.4 Safety and precautions in operation 6
5.5 Planning of survey 7
5.6 Quality control in field data collection 7
5.7 Site/area details 7

6 Electrical resistivity 7
6.1 Purpose 7
6.2 Principles of measurement 8
6.3 Instruments 13
6.4 Field procedures 13
6.5 Processing of data 15
6.6 Interpretation 15
6.7 Advantages 17
6.8 Disadvantages 17
6.9 Limitations 17

7 Self-potential 18
7.1 Purpose 18
7.2 Principles of measurement 18
7.3 Instrument 18
7.4 Field procedures 18
7.5 Processing of data 19
7.6 Interpretation 19
7.7 Advantages 19
7.8 Disadvantages 19
7.9 Limitations 19

8 Frequency domain electromagnetic (horizontal loop) 20
8.1 Purpose 20
8.2 Principles of measurement 20
8.3 Instrument 21
8.4 Field procedures 21
8.5 Processing of data 22
8.6 Interpretations 22
8.7 Advantages 22

8.8 Disadvantages 23
8.9 Limitations 23

9 Transient (time domain) electromagnetic 23
9.1 Purpose 23
9.2 Principles of measurement 23
9.3 Instrument 23
9.4 Field procedures 24
9.5 Processing of data 24
9.6 Interpretation 24
9.7 Advantages 24
9.8 Disadvantages 24
9.9 Limitations 25

10 Very low frequency (VLF) electromagnetic 25
10.1 Purpose 25
10.2 Principles of measurement 25
10.3 Instrument 25
10.4 Field procedures 26
10.5 Processing of data 26
10.6 Interpretation 26
10.7 Advantages 27
10.8 Disadvantages 27
10.9 Limitations 27

11 Seismic refraction 27
11.1 Purpose 27
11.2 Principles of measurement 27
11.3 Instruments 31
11.4 Field procedure 31
11.5 Processing of data 32
11.6 Interpretation 32
11.7 Advantages 32
11.8 Disadvantages 32
11.9 Limitations 32

12 Seismicreflection 32
12.1 Purpose 32
12.2 Principles of measurement 33
12.3 Instrument 33
12.4 Field procedures 33
12.5 Acquisition and processing of data 34
12.6 Interpretation 34
12.7 Advantages 34
12.8 Disadvantages 34
12.9 Limitations 35
12.10 Comparison of seismic refraction and reflection methods 35

13 Magnetic 35
13.1 Purpose 35
13.2 Principles of measurement 35
13.3 Instrument 36
13.4 Field procedures 36
13.5 Processing of data 37
13.6 Interpretation 38
13.7 Advantages 38
13.8 Disadvantages 38
13.9 Limitations 38

14 Gravity 38
14.1 Purpose 38

14.2 Principles of measurement 38
14.3 Instrument 39
14.4 Field procedure 39
14.5 Processing of data 39
14.6 Micro-gravity measurements 39
14.7 Interpretation 40
14.8 Advantages 40
14.9 Disadvantages 40
14.10 Limitations 40

15 Other techniques 40
15.1 Induced polarization 40
15.1.1 Purpose 40
15.1.2 Principles of measurement 41
15.1.3 Instrument 41
15.1.4 Field procedures 41
15.1.5 Processing of data 42
15.1.6 Interpretation 42
15.1.7 Advantages 42
15.1.8 Disadvantages 42
15.1.9 Limitations 42
15.2 Mise-a-la-masse 42
15.2.1 Purpose 42
15.2.2 Principles of measurement 42
15.2.3 Instrument 43
15.2.4 Field procedures 43
15.2.5 Processing of data 43
15.2.6 Interpretation 43
15.2.7 Advantages 44
15.2.8 Disadvantages 44
15.2.9 Limitations 44
15.3 Ground-Penetrating Radar (GPR) 44
15.3.1 Purpose 44
15.3.2 Principles of measurements 44
15.3.3 Field procedures and data acquisition 45
15.3.4 Interpretation 47
15.3.5 Advantages 49
15.3.6 Disadvantages 49

16 Report writing and presentation of results 50

Bibliography 52
