DIN EN 16859:2017-07 (E)

Water Quality - Guidance standard on monitoring freshwater pearl mussel (Margaritifera margaritifera) populations and their environm ent

Contents

Page

European foreword ... 5

Introduction ... 6

1 Scope ... 7

2 Normative references ... 7

3 Terms and definitions ... 7

4 Monitoring and assessing the condition of a *Margaritifera* population ... 12
4.1 Requirements for a sustainable *Margaritifera* population ... 12
4.1.1 General ... 12
4.1.2 Monitoring ... 12
4.2 Training and quality assurance for pearl mussel survey and assessment ... 14
4.2.1 Pearl mussel survey ... 14
4.2.2 Training manuals ... 15
4.2.3 Data entry and validation ... 15
4.2.4 Licences ... 15

5 Monitoring the environmental conditions needed to support *Margaritifera margaritifera* populations ... 15
5.1 General ... 15
5.2 Fish hosts ... 16
5.2.1 Fish host species ... 16
5.2.2 Barriers to fish migration ... 17
5.2.3 Host suitability ... 17
5.3 Water quality ... 17
5.3.1 General ... 17
5.3.2 Phosphorus ... 17
5.3.3 Nitrogen, including ammonia ... 17
5.3.4 BOD_5 / dissolved oxygen ... 18
5.3.5 pH ... 18
5.3.6 Calcium ... 18
5.3.7 Alkalinity ... 18
5.3.8 Electrical conductivity ... 18
5.3.9 Temperature ... 18
5.3.10 Contaminants ... 19
5.3.11 Turbidity, suspended solids ... 19
5.3.12 Biotic indicators of water quality ... 20
5.4 Hydromorphology ... 21
5.4.1 Monitoring requirements ... 21
5.4.2 Flow ... 22
5.4.3 Physical habitat structure ... 23
5.4.4 Substrate quality ... 24
5.4.5 Substrate stability ... 25
5.4.6 Trees and wood ... 25
5.4.7 Instream modifications ... 25

6 Monitoring environmental pressures 25
7 Information needed to assess plans or projects on rivers with *Margaritifera* 27
Annex A (informative) Background information on the environmental characteristics important for maintaining populations of *Margaritifera margaritifera* 29
A.1 Fish hosts 29
A.1.1 Fish host species 29
A.1.2 Barriers to fish migration 29
A.1.3 Host suitability and stocking practices 29
A.2 Water quality 30
A.2.1 Phosphorus 30
A.2.2 Nitrogen, including ammonia 30
A.2.3 BOD_5/dissolved oxygen 30
A.2.4 pH 30
A.2.5 Calcium 31
A.2.6 Alkalinity 31
A.2.7 Electrical conductivity 31
A.2.8 Temperature 32
A.2.9 Contaminants 32
A.2.10 Turbidity, suspended solids 32
A.3 Biotic indicators of water quality 33
A.3.1 Macroinvertebrates 33
A.3.2 Diatoms 33
A.3.3 Filamentous algae 33
A.3.4 Macrophytes 33
A.4 Hydromorphology 34
A.4.1 Flow 34
A.4.2 Physical habitat structure 34
A.4.3 Substrate quality 35
A.4.4 Substrate stability 36
A.4.5 Trees and wood 36
A.4.6 Instream modifications 36
A.5 Biotic factors and other interactions 37
A.5.1 Pressures and interferences 37
A.5.2 Human interference 37
A.5.3 Invasive non-native species 37
A.5.4 Non-native fish 37
A.5.5 Non-native molluscs 37
A.5.6 Non-native crayfish 38
A.5.7 Non-native plants 38
A.5.8 Non-native mammals 38

Annex B (informative) Targets for assessing whether *Margaritifera* populations are in favourable condition **39**

Annex C (informative) Range of environmental conditions supporting sustainable populations of *Margaritifera* **40**

Bibliography **44**
