ISO 17924:2018 (E)

Soil quality — Assessment of human exposure from ingestion of soil and soil material — Procedure for the estimation of the human bioaccessibility/ bioavailability of metals in soil

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Bioaccessibility/Bioavailability as a concept in assessment of soils and sites with respect to human exposure

5 Description of the mechanisms of human contaminant uptake

6 Description of metal binding mechanisms (speciation of metals) in soil

7 Use and interpretation of in vitro tests for risk assessment

8 Description of test method

- 8.1 Test principle
- 8.2 Apparatus
- 8.3 Reagents
- 8.4 Preparation of simulated fluids
- 8.4.1 General
- 8.4.2 Simulated saliva fluid (1 000 ml)
- 8.4.3 Simulated gastric fluid (1 000 ml)
- 8.4.4 Simulated duodenal fluid (1 000 ml)
- 8.4.5 Simulated bile fluid (1 000 ml)
- 8.4.6 pH control of mixed fluids
- 8.5 Sample pre-treatment
- 8.5.1 General
- 8.5.2 Preparation of test samples
- 8.5.3 Typical analysis protocol
- 8.6 Sample preparation procedure

9 Data handling, quality control and presentation of results

- 9.1 General
- 9.2 Bioaccessibility calculation

Annex A (informative) Sample preparation procedure
