ISO 20468-2:2019 (E)

Guidelines for performance evaluation of treatment technologies for water reuse systems — Part 2: Methodology to evaluate performance of treatment systems on the basis of greenhouse gas emissions

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms, definitions, and abbreviated terms

3.2 Abbreviated terms

4 Symbols

5 Principles

5.1 General
5.2 Relevance
5.3 Completeness
5.4 Consistency
5.5 Accuracy
5.6 Transparency

6 Boundary conditions

6.1 General
6.2 Treatment system
6.3 Residue management system
6.4 Auxiliary system

7 Calculation

7.1 Calculation procedure
7.2 Step 1: Establish boundary conditions of evaluation
7.3 Step 2: Calculate annual amount of reclaimed water
7.4 General descriptions of methodological issues when calculating GHG emissions for Step 3 to Step 6
7.4.1 Choice of method to determine GHG emissions
7.4.2 Choice of activity data
7.4.3 Choice of emission factors
7.5 Step 3: Calculate GHG emissions resulting from energy consumption
7.5.1 Data acquisition
7.5.2 Calculate GHG emissions
7.6 Step 4: Calculate GHG emissions resulting from biological treatment processes
7.6.1 Data acquisition
7.6.2 Calculate GHG emissions
7.7 Step 5: Calculate GHG emissions resulting from consumables and generation of wastes
7.7.1 Data acquisition
7.7.2 Calculate GHG emissions
7.8 Step 6: Calculate GHG emissions reduced through the effective utilization of resources resulting from the production of reclaimed water
7.9 Step 7: Calculate total GHG emissions
7.10 Step 8: Calculate CO2eq emission intensity

8 Application of CO2eq emission intensity in evaluating the environmental performance of a treatment system

Annex A (informative) Examples of emission factors

Annex B (informative) Example of a worksheet for calculating total GHG emissions

Annex C (informative) Example of CO2eq emission intensity calculation

C.1 General
C.2 Step 1: Establish boundary conditions of evaluation
C.3 Step 2: Calculate amount of reclaimed water
C.4 Step 3: Calculate GHG emissions resulting from energy consumption
C.5 Step 4: Calculate GHG emissions resulting from each biological treatment process
C.6 Step 5: Calculate GHG emissions resulting from consumables and generation of wastes
C.7 Step 6: Calculate GHG emissions reduced through the effective utilization of resources resulting from the production of reclaimed water
C.8 Step 7: Calculate total GHG emissions
C.9 Step 8: Calculate CO2eq emission intensity
