ISO 21365:2019-10 (E)

Soil quality - Conceptual site models for potentially contaminated sites

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Basics 3
4.1 Structure of this document 3
4.2 Principles 4
4.3 Scope of a conceptual site model 5
4.4 Representing and communicating a conceptual site model 5

5 Development of a conceptual site model 6
5.1 Step wise procedure 6
5.2 Step 1: Defining overall objectives and the boundaries (both spatial and temporal) 8
5.3 Step 2: Identifying the known and potential contaminant(s) and characterizing the source 8
5.4 Step 3: Identifying and characterizing each known and potential contaminated medium 9
5.5 Step 4: Identifying potential migration pathways 10
5.6 Step 5: Identifying potential receptors, exposure pathways and points of exposure 13
5.7 Step 6: Identifying possible foreseeable events 15

6 Conceptual site model development during site investigation 15
6.1 General 15
6.2 Preliminary investigation 16
6.3 Exploratory investigation 17
6.4 Detailed investigation 17
6.5 Supplementary Investigation 17

7 Conceptual site model for remediation and mitigation measures 18

8 Conceptual site model for construction works 18

9 Data collection and Quality Assurance 19

Annex A (informative) Expressions and illustrations of conceptual site models for potentially contaminated sites 20

Annex B (informative) Scope of phases of investigation (based on ISO 18400-203) 33

Annex C (informative) Investigations phases and links with conceptual site model (adapted from ISO 18400-202 and 18400-203) 35

Annex D (informative) Review during and after Remediation and Construction works 37

Bibliography 39
