ISO 10703:2021 (E)

Water quality — Gamma-ray emitting radionuclides — Test method using high resolution gamma-ray spectrometry

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols

5 Principle

6 Reference sources

6.1 Source(s) for energy calibration
6.2 Reference source(s) for efficiency calibration
6.2.1 General
6.2.2 Reference sources for laboratory systems
6.2.3 Reference sources used with numerical methods

7 Reagents

8 Gamma-ray spectrometry equipment

8.1 General description
8.2 Detector types
8.3 High voltage power supply
8.4 Preamplifier
8.5 Cryostat or electric cooler
8.6 Shielding
8.7 Analogue or digital acquisition electronics
8.7.1 General
8.7.2 Analogue electronic (ADC)
8.7.3 Digital electronic (DSP)
8.8 Computer, including peripherical devices and software

9 Nuclear decay data

10 Sampling

11 Procedure

11.1 Sample preparation
11.1.1 General
11.1.2 Direct measurement without preparation
11.1.3 Evaporation without iodine retention
11.1.4 Evaporation with iodine retention
11.2 Calibration
11.2.1 General
11.2.2 Energy calibration
11.2.3 Efficiency calibration

12 Expression of results

12.1 Calculation of the activity concentration

12.1.1 General
12.1.2 Dead time and pile up corrections (see ISO 20042)
12.1.3 Decay corrections
12.1.4 True coincidence summing
12.1.4.1 General
12.1.4.2 Probability of true-coincidence summing
12.1.4.3 Consequences for source-based efficiency calibrations and for sample count
12.1.4.4 Reducing the effect of true-coincidence summing
12.2 Standard uncertainty
12.3 Decision threshold
12.4 Detection limit
12.5 Limits of the coverage intervals
12.5.1 Limits of the probabilistically symmetric coverage interval
12.5.2 The shortest coverage interval
12.6 Corrections for contributions from other radionuclides and background
12.6.1 General
12.6.2 Contribution from other radionuclides
12.6.3 Contribution from background

13 Test report

Annex A (informative) Example of a carrier solution which can be added to the water sample when waste water from a nuclear power plant is investigated

Annex B (informative) True coincidence summing

B.1 Gamma-gamma coincidence
B.2 Gamma-x-ray coincidence
B.3 Gamma-annihilation photon coincidence

Annex C (informative) Calculation of the activity concentration from a gamma spectrum using a linear background subtraction (undisturbed peak)
