DIN 1989-100:2022-07 (E)

Rainwater harvesting systems - Part 100: Regulations in connection with DIN EN 16941-1

Contents

Page

Foreword 5

1 Scope 7

2 Normative references 7

3 Terms and definitions 9

4 Planning principles for installation design 10
4.1 Consumption values 10
4.2 Infiltration 11

5 Cleaning mechanisms 11

6 Filters 12
6.1 Requirements 12
6.1.1 General 12
6.1.2 Materials 12
6.1.3 Filter types 13
6.1.4 Hydraulic requirements 15
6.1.5 Filter separation efficiency 16
6.1.6 Leaktightness 16
6.1.7 Stability 16
6.2 Testing 16
6.2.1 General 16
6.2.2 Materials, dimensions, filter elements and filter inserts 17
6.2.3 Design and installation location 17
6.2.4 Checking compliance with hydraulic requirements 17
6.2.5 Test of the filter separation efficiency 21
6.3 Marking 24
6.4 Installation, operation and maintenance of filters 24

7 Rainwater storage tanks 25
7.1 Dimensions and tolerances 25
7.1.1 Tanks 25
7.1.2 Inspection openings 25
7.1.3 Manholes and access openings 26
7.1.4 Storage tank characteristics 27
7.1.5 Built-in components 28
7.1.6 Tank connections 28
7.2 Installation and assembly 28
7.2.1 Access openings and manholes 28
7.2.2 Manhole covers 28
7.2.3 Watertightness 29
7.2.4 Stability 29
7.2.5 Design 32
7.2.6 Protection against backwater 32
7.3 Testing 33
7.3.1 Dimensions 33
7.3.2 Watertightness 34
7.3.3 Stability 34

8 Rainwater system controls ... **35**
8.1 Construction principles ... **35**
8.1.1 General requirements ... **35**
8.1.2 Electrical protection class ... **35**
8.1.3 Operating condition limits ... **35**
8.2 Minimum requirements for rainwater system controls ... **35**
8.3 Noise level ... **36**
8.4 Testing ... **36**
8.4.1 General ... **36**
8.4.2 Electrical safety ... **37**
8.4.3 Leakage rate of the backflow preventer of the backflow protection ... **37**
8.4.4 Simplified method of measuring the noise level ... **37**
9 Identification plate ... **39**
Annex A (informative) **Example of a calculation form for determining rainwater yield, operating demand and usable capacity of rainwater storage tanks** ... **40**
Annex B (informative) **Examples of determining the separation efficiency of a filter** ... **41**
B.1 General ... **41**
B.2 Example of determining the separation efficiency of type A filters ... **41**
B.3 Example of determining the separation efficiency of type B filters ... **42**
B.4 Examples of determining the separation efficiency of type C filters ... **43**
B.5 Extreme examples ... **44**
Annex C (informative) **Example of a test report for filters** ... **46**
Annex D (informative) **Examples of common system types in Germany and their integration into building services engineering** ... **48**
Bibliography ... **51**

Figures

Figure 1 — Principle of type A filters, schematic ... **14**
Figure 2 — Principle of type B filters, schematic ... **15**
Figure 3 — Principle of type C filters, schematic ... **15**
Figure 4 — Test assembly ... **18**
Figure 5 — Tank dimensions ... **25**
Figure 6 — Manhole — inspection chamber combination ... **26**
Figure 7 — Example of an inspection chamber with manhole height ≤ 450 mm ... **27**
Figure 8 — Example of an inspection chamber with manhole height > 450 mm ... **27**
Figure 9 — Rainwater storage tank with double anti-flooding device and connection to combined sewage system ... **33**
Figure 10 — Test set-up for measuring the sound pressure level ... **38**
Figure B.1 — Test arrangement for determining the separation efficiency of type A filters ... **41**
Figure B.2 — Test arrangement for determining the separation efficiency of type B filters ... **42**
Figure B.3 — Test arrangement for determining the separation efficiency of type C filters ... **43**
Figure C.1 — Representation of hydraulic efficiency ... **47**
Figure D.1 — Rainwater harvesting system with buried tank and infiltration system ... **48**

Figure D.2 — Rainwater harvesting system with tank in basement 49

Figure D.3 — Rainwater harvesting system with buried tank and hybrid tank, e.g. for trade and industry 50
