

ISO 23040:2021-12 (E)

Marine environment impact assessment (MEIA) - Specification for marine sediments in seabed areas - Survey of interstitial biota

Contents		Page
Foreword.....		viii
Introduction.....		ix
1	Scope.....	1
2	Normative references.....	1
3	Terms and definitions.....	1
4	General.....	2
4.1	Technical design.....	2
4.2	Basic recommendations for the surveys.....	2
	4.2.1 Survey object.....	2
	4.2.2 Auxiliary parameters.....	3
	4.2.3 Recommendations for the sampling equipment.....	3
	4.2.4 Auxiliary equipment on board ship.....	3
	4.2.5 Sampling method and scope of application.....	3
4.3	Sampling.....	3
	4.3.1 Sediment sampling.....	3
	4.3.2 Trawl sampling.....	3
	4.3.3 Water sampling.....	4
	4.3.4 Records.....	4
4.4	Sample analysis.....	4
	4.4.1 Sample treatment.....	4
	4.4.2 Sample measurement.....	4
	4.4.3 Sample treatment and storage.....	4
	4.4.4 Sample identification and enumeration.....	4
	4.4.5 Sample data analysis.....	4
4.5	Basic recommendations of data organization.....	5
	4.5.1 Organization of data.....	5
	4.5.2 Data archiving, acceptance and achievements appraisal.....	5
4.6	Survey results.....	5
	4.6.1 Original records.....	5
	4.6.2 Maps or drawings.....	5
	4.6.3 Investigation report.....	5
4.7	Data archiving.....	6
4.8	Program and quality control.....	6
5	Survey of the sediment.....	6
5.1	Principle.....	6
5.2	General provisions.....	7
5.3	Collection and preservation of the samples.....	7
5.4	Measurement of environmental factors.....	7
5.5	Measurement of the age of the sediments.....	7
5.6	Measurement of the contents of heavy metals, organic pollutants and oils in the sediments.....	7
5.7	Measurement of the grain size of the sediments.....	7
5.8	Analysis of the mineral compositions in the sediments.....	8
5.9	Classification of the substrate type in offshore sediments.....	8
5.10	Classification of the deep-sea sediments.....	8
5.11	Survey of the biological components in the sediments.....	8
	5.11.1 Summary of the methods.....	8

	5.11.2	Technical recommendations.....	8
	5.11.3	Collection and preservation of the samples.....	9
	5.12	Organization of data.....	9
6		Survey of foraminifera.....	9
	6.1	Principle.....	9
	6.2	General provisions.....	9
	6.3	Collection and preservation of the samples.....	9
	6.3.1	Sampling and sample processing.....	9
	6.3.2	Collection and preservation of the sedimentary tests.....	10
	6.3.3	Collection and preservation of living foraminifera.....	10
	6.4	Tools and reagents.....	10
	6.5	Processing and analysis of the samples.....	10
	6.5.1	Numbering and weighing the crystallizing dish or beaker.....	10
	6.5.2	Drying and weighing the sediment sample.....	11
	6.5.3	Sample soaking.....	11
	6.5.4	Washing and drying.....	11
	6.5.5	Suspension and concentration.....	11
	6.5.6	Bottling and sealing.....	11
	6.5.7	Specimen preparation and analysis.....	11
7		Survey of ostracoda.....	12
	7.1	Principle.....	12
	7.2	General provisions.....	12
	7.3	Collection and preservation of the samples.....	12
	7.3.1	Sampling and sample processing.....	12
	7.3.2	Collection and preservation of dead ostracod tests.....	13
	7.3.3	Collection and preservation of living ostracods.....	13
	7.4	Tools and reagents.....	13
	7.5	Processing and analysis of the samples.....	13
	7.5.1	Numbering and weighing the crystallizing dish or beaker.....	13
	7.5.2	Drying and weighing.....	13
	7.5.3	Sample soaking.....	14
	7.5.4	Washing and drying.....	14
	7.5.5	Suspension and concentration.....	14
	7.5.6	Bottling and sealing.....	14
	7.5.7	Microscopic examination and enumeration.....	14
8		Survey of radiolaria.....	15
	8.1	Principle.....	15
	8.2	General provisions.....	15
	8.3	Collection and preservation of the samples.....	15
	8.3.1	Sample processing.....	15
	8.3.2	Collection and conservation of deposited empty shells.....	16
	8.4	Tools and reagents.....	16
	8.5	Processing and analysis of the samples.....	16
	8.5.1	Sample pretreatment.....	16
	8.5.2	Preparation of microscope slide specimens.....	16
9		Survey of sedimentary diatom.....	17
	9.1	Principle.....	17
	9.2	General provisions.....	17
	9.3	Collection and preservation of the samples.....	17
	9.3.1	Sampling and treatment.....	17
	9.3.2	Collection and preservation of sedimentary remains.....	18
	9.4	Tools and reagents.....	18
	9.5	Processing and analysis of the samples.....	18
	9.5.1	Sample pretreatment.....	18
	9.5.2	Preparation of microscope slide specimens.....	19
	9.6	Organization of data.....	19
10		Survey of coccoliths.....	19
	10.1	Principle.....	19
	10.2	General provisions.....	19
	10.3	Collection and preservation of the samples.....	20
	10.4	Tools and reagents.....	20

10.5	Processing and analysis of the samples.....	20
10.5.1	Pre-preparation of the equipment and the samples.....	20
10.5.2	Method of preparing simple smear slides.....	21
10.5.3	Pre-concentration of coccolith samples.....	21
10.6	Organization of data.....	21
11	Survey of sporopollen.....	22
11.1	Principle.....	22
11.2	General provisions.....	22
11.3	Collection and preservation of the samples.....	23
11.4	Tools and reagents.....	23
11.5	Processing and analysis of the samples.....	23
11.5.1	Sample disaggregation.....	23
11.5.2	Alkali-soluble digestion.....	24
11.5.3	Sieving.....	24
11.5.4	Carbonate digestion.....	24
11.5.5	Silicate digestion.....	24
11.5.6	Ultrasonic cleaning and sieving.....	24
11.5.7	Acetolysis.....	25
11.5.8	Storage of processed sample.....	25
11.5.9	Mounting sporopollen specimens.....	25
11.5.10	
	Glycerine jelly preparation.....	25
11.5.11	
	Precautions.....	25
11.6	Organization of data.....	26
12	Survey of benthic viruses.....	26
12.1	Principle.....	26
12.2	General provisions.....	26
12.3	Collection and preservation of the samples.....	26
12.3.1	Samples for epifluorescence microscopy.....	26
12.3.2	Samples for flow cytometry.....	27
12.3.3	Samples for environmental measurements and molecular diversity of viruses.....	27
12.4	Tools and reagents.....	27
12.4.1	Equipment and reagents for epifluorescence microscopy.....	27
12.4.2	Equipment and reagents for flow cytometry.....	28
12.4.3	Equipment and tools for molecular diversity of viruses.....	28
12.5	Processing and analysis of samples.....	28
12.5.1	Enumeration of viruses by epifluorescence microscopy.....	28
12.5.2	Procedure for flow cytometry.....	30
12.5.3	Estimation of the molecular diversity of viruses.....	30
13	Survey of benthic microbes.....	32
13.1	Principle.....	32
13.2	General provisions.....	32
13.3	Collection and preservation of the samples.....	33
13.3.1	Sampling stations and sample collection.....	33
13.3.2	On-site sample process.....	33
13.3.3	Sample storage.....	33
13.4	Tools and reagents.....	34
13.4.1	Equipment.....	34
13.4.2	Reagents.....	34
13.5	Processing and analysis of the samples.....	36
13.5.1	Assessment of molecular diversities of benthic microbes.....	36
13.5.2	Benthic microbial abundance.....	41
14	Survey of benthic microalgae.....	44
14.1	Principle.....	44

14.2	General provisions	44
14.3	Collection and preservation of the samples	45
	14.3.1 Sampling design	45
	14.3.2 Sampling methods	45
	14.3.3 Sample preservation and fixation	46
14.4	Tools and reagents	46
14.5	Processing and analysis of the samples	46
	14.5.1 Sample processing	46
	14.5.2 Sample analysis	48
	14.5.3 Abundance and biomass calculation	48
	14.5.4 Cyst culture and identification	50
	14.5.5 Fluorescence determination of demagnesium chlorophyll and chlorophyll a	50
	14.5.6 Algal toxins determination	51
15	Survey of benthic protozoa	51
15.1	Principle	51
15.2	General provisions	51
15.3	Collection and preservation of the samples	52
	15.3.1 Sampling equipment	52
	15.3.2 Sediment core collection	52
	15.3.3 Sediment layers	52
	15.3.4 Sample fixation and preservation	52
	15.3.5 Collection and treatment of living protozoa	53
15.4	Tools and reagents	54
	15.4.1 Equipment and reagents for silica sol centrifugation	54
	15.4.2 Equipment and reagents of quantitative protargol staining	54
	15.4.3 Equipment and reagents for molecular analysis	54
15.5	Processing and analysis of the samples	55
	15.5.1 Silica sol density centrifugation	55
	15.5.2 Quantitative protargol stain (QPS)	56
	15.5.3 Estimation of molecular diversity	59
16	Survey of metazoan meiobenthos	64
16.1	Principle	64
16.2	General provisions	65
16.3	Collection and preservation of the samples	65
	16.3.1 Sampling in intertidal zones and shallow waters	65
	16.3.2 Deep-sea sampling	65
	16.3.3 Sample slicing	66
	16.3.4 Sample fixation and preservation	67
	16.3.5 Labelling	67
	16.3.6 Record	67
16.4	Tools and reagents	67
16.5	Processing and analysis of the samples	67
	16.5.1 Quantification and taxa analysis	67
	16.5.2 Molecular analysis of biodiversity	68
16.6	Organization of data	69
	16.6.1 Precision	69
	16.6.2 Abundance	69
	16.6.3 Biomass	70
	16.6.4 Complete the report	71
	16.6.5 Plotting data	71
	Annex A (informative) Photographs of several groups of communities of interstitial biota	72
	Annex B (informative) Several stratified sampling devices for the survey of interstitial biota	74
	Annex C (informative) Tables for sample labelling and sampling record — Examples	76
	Annex D (informative) Tables of microscopy records — Examples	78
	Annex E (informative) Calculation of community parameters	83

Annex F (informative) Record sheet for sample treatment — Examples	86
Annex G (informative) Characteristics for the classification of coccoliths.....	87
Annex H (informative) Flow diagram for the enumeration of viruses by epifluorescence microscopy.....	88
Annex I (informative) Filter unit used in microbenthos survey	89
Annex J (informative) Technical flowcharts for the investigation of microbenthos.....	90
Annex K (informative) Solutions and reagents.....	93
Bibliography.....	99
