DIN EN 17800:2023-03 (E)

Life cycle cost (LCC) and life cycle assessment (LCA) for CO_2 emissions in ductile iron pipe systems

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms, definitions and abbreviated terms 6
3.1 Terms and definitions 6
3.2 Abbreviated terms 9

4 Basic concept of life cycle cost (LCC) for ductile iron pipe systems 9
4.1 Definition of life cycle cost 9
4.2 Calculation method 10

5 Breakdown of life cycle cost 12
5.1 Acquisition cost 12
5.2 Operation cost 13
5.3 Maintenance cost 13
5.4 End of life cost or revenue 13

6 Basic concept of life cycle assessment (LCA) for ductile iron pipe systems 14
6.1 Definition of CO2 emissions impact 14
6.2 Calculation method of CO2 emissions 14

7 Breakdown of CO2 emissions 15
7.1 CO2 emissions at the acquisition stage 15
7.2 CO2 emissions at the operation stage 15
7.3 CO2 emissions at the maintenance stage 16
7.4 CO2 emissions at end of life stage 16

8 Key drivers for LCC and LCA evaluation 17
8.1 General 17
8.2 Reference service life (RSL) 17
8.3 Functional unit (FU) 18
8.4 Water leaks volume 18
8.5 Failure rate 18

9 Quality of data 18

Annex A (informative) Pumping cost and CO2 emissions with pump operation 20

A.1 Pumping cost 20
A.2 Daily pumping energy 20
A.3 Total head loss 21
A.4 CO2 emissions with pump operation 22

Annex B (informative) Scenarios of LCC and CO2 emissions with different DI pipelines 23

B.1 Scenarios of LCC 23

B.2 Scenarios of CO2 emissions 24

Annex C (informative) Water leaks and failure rate of ductile iron pipelines 25

C.1 water leaks evaluation 25
C.2 Examples of failure rates 25
C.2.1 General 25
C.2.2 Example in France 26
C.2.3 Example in Germany 26
C.2.4 Example in Spain 27

Annex D (informative) Circular economy, LCC and CO2 emissions 28

D.1 General 28
D.2 Conservation of mechanical characteristics in time 28
D.3 Recyclability 28
D.4 Worldwide scrap collecting 28
D.5 Optimum hydraulic conveyance capacity 29
D.6 Optimum pipe wall thickness 29
D.7 Preservation of soil 29
