ISO 21939-2:2023-12 (E)

Method to calculate and express energy consumption of industrial wastewater treatment for the purpose of water reuse - Part 2: Accounting for energy recovery

Contents

Page

Foreword ... **iv**

Introduction ... **v**

1 Scope ... **1**

2 Normative references ... **1**

3 Terms, definitions and abbreviated terms ... **1**
3.1 Terms and definitions ... 1
3.2 Abbreviated terms ... 2

4 Energy recovery scenarios from wastewater and sludge anaerobic treatment processes ... **2**
4.1 General ... 2
4.2 Processing biogas from anaerobic digestion ... 2
4.3 Flaring ... 2
4.4 Electricity generation ... 2
4.5 Steam generation ... 2
4.6 Heat recovery CHP generation ... 3
4.7 Discharge of raw or processed gas for offsite use ... 3

5 Guidelines for handling data on energy recovery ... **3**
5.1 General ... 3
5.2 Limitation of contaminated components and impurities in biogas ... 3
5.2.1 Limit levels for trace substances and impurities ... 3
5.2.2 Gas cleaning systems ... 4
5.2.3 Limitations on emissions from flaring systems ... 4
5.2.4 Data and information required for the calculation of biogas yield ... 5
5.3 Wastewater treatment plant energy uses ... 5
5.4 Accounting for variable conditions ... 5
5.4.1 General ... 5
5.4.2 Typical values for preliminary design ... 6

6 Quantifying the power generation for each energy recovery scenario ... **6**
6.1 General ... 6
6.2 Electricity generation ... 6
6.3 Steam generation ... 7
6.4 Heat recovery (hot water) ... 7
6.5 CHP generation ... 7

7 Expression of energy production and integration with energy consumption calculations ... **8**

Annex A (informative) **Main energy uses in wastewater treatment plants** ... **9**

Annex B (informative) **Examples of calculations** ... **10**

Bibliography ... **12**
