

ISO 13196:2026-05 (E)

Soil quality - Screening soils for selected elements by energy-dispersive X-ray fluorescence spectrometry using a handheld or portable instrument

Contents		Page
Foreword		iv
Introduction		v
1 Scope		1
2 Normative references		2
3 Terms and definitions		2
4 Principle		4
5 Apparatus		4
5.1 XRF spectrometer.....		4
5.2 Container for sampling and preparation.....		4
5.3 Sampling equipment.....		5
5.4 Sieve.....		5
5.5 Sample cup for portable XRF spectrometers.....		5
5.6 Sample container for handheld XRF spectrometers.....		5
5.7 Drying device (optional).....		5
6 Procedure		6
6.1 General.....		6
6.2 Performance check of instrument.....		6
6.3 Calibration.....		6
6.4 Preparation in advance of site investigation.....		7
6.5 In-situ measurement (including strictly in-situ measurement).....		7
6.5.1 Secure working area.....		7
6.5.2 Preparation of the measuring spot.....		7
6.5.3 Surface or spot measurement.....		7
6.6 Post-sampling measurement.....		8
6.6.1 Preparation of samples.....		8
6.6.2 Sample measurement and calculation.....		9
7 Specific applications: site-specific performance		9
8 Quality assurance and control		10
8.1 General.....		10
8.2 Performance test.....		10
8.2.1 XRF spectrometer performance.....		10
8.2.2 Test certified reference materials.....		10
8.3 XRF spectrometer energy calibration.....		11
8.4 Complementary analysis/validation for quantitative results.....		11
9 Test report		11
Annex A (informative) Conclusion of the interlaboratory trial		13
Annex B (informative) Energy dispersive X-ray fluorescence spectrometry (ED-XRF) measurement usefulness		21
Bibliography		22
