ISO/TS 21738:2026-06 (E)

Water quality - Active biomonitoring method with in situ caged benthic amphipods

Contents

Page

Foreword ... **iv**

Introduction ... **v**

1 Scope ... **1**

2 Normative references ... **1**

3 Terms and definitions ... **1**

4 Principle of the method ... **2**

5 Organisms and equipment ... **2**
5.1 Organism origin ... 2
5.2 Test organism ... 3
5.2.1 Sex ... 3
5.2.2 Weight ... 4
5.3 Equipment ... 5
5.3.1 Sieve ... 5
5.3.2 Cage ... 5
5.3.3 Vials used for storage prior to chemical analysis ... 7
5.3.4 Spin dryer ... 7
5.3.5 Balance ... 7
5.3.6 Physico-chemical probes ... 7

6 Test organism preparation in laboratory ... **7**
6.1 Acclimatization period of amphipods ... 7
6.2 Test organism selection criteria ... 8
6.3 Laboratory measurements and conditioning of organisms for analysis ... 9
6.4 Caging of test organisms for dispatch ... 9

7 Exposure of test organisms in the monitoring station ... **9**
7.1 Monitoring station environmental condition check ... 9
7.2 Dispatch to monitoring station ... 10
7.3 Test organism transplantation ... 10
7.4 Retrieval of test organisms ... 11

8 Test organism conditioning in the laboratory ... **11**
8.1 Reception of test organisms at the laboratory ... 11
8.2 Placing of test organisms in vials ... 11

9 Test report ... **12**

Annex A (informative) **Application domain** ... **13**

Annex B (informative) **Acclimatization conditions** ... **15**

Bibliography ... **17**
