ISO 17805:2026-07 (E)

Water quality - Sampling, capture and preservation of environmental DNA from water

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Principle 3

5 Procedure 4
5.1 General 4
5.2 Considerations prior to fieldwork 5
5.3 Equipment preparation prior to fieldwork 5
5.4 Sampling the eDNA from water 5
5.5 Preserving the sample 6
5.5.1 General 6
5.5.2 Preserving eDNA in enclosed filters 6
5.5.3 Preserving eDNA in open filters 6
5.5.4 Preserving eDNA in housed filters 7

6 Equipment and its use 7

7 Preservative solutions 8
7.1 General 8
7.2 Examples of preservative solutions that can be made in-house 9

8 Sampling report 9
8.1 General 9
8.2 Required parameters 9
8.3 Highly recommended parameters 10
8.4 Recommended parameters 10

9 Avoiding sample contamination 11
9.1 General 11
9.2 Contamination that originates from equipment and people during sample collection and processing 11
9.3 Decontamination procedure for sampling equipment 12
9.3.1 General 12
9.3.2 Materials and equipment that are in direct contact with the water sample 12
9.3.3 Materials and equipment that are not in direct contact with the water sample 12

Annex A (informative) Filter types 13

Annex B (informative) Metadata 15
