DIN EN 14154-1:2007-07 (E)

Water meters - Part 1: General requirements (includes Amendment A1:2007)

Contents

Page

Foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Technical characteristics 12
4.1 Meter size and overall dimensions 12
4.1.1 Meter size 12
4.1.2 Dimensions of in-line meters 12
4.1.3 Dimensions of concentric meters 14
4.2 Meter and connections 15
4.2.1 Connections interfaces 15
4.2.2 Threaded and connections 15
4.2.3 Flanged connection 16
4.2.4 Connection for bolting in between flanges 16
4.2.5 Dimensions for manifold(s) for concentric meters 16
4.3 Indicating device 16
4.3.1 General requirements 16
4.3.2 Types of indicating device 18
4.3.3 Verification devices - First element - Verification scale interval 18
4.4 Water meters which utilise electronic devices 19
4.4.1 Checking facilities 19
4.4.2 Power supply 19
4.4.3 Correction device 21
4.4.4 Calculator 21
4.4.5 Ancillary device 21
4.5 Materials and construction 21
4.6 Protection against solid particles 22
4.7 Reverse flow 22
4.8 Meter security and protection against fraud 22
4.8.1 Mechanical protection devices 22
4.8.2 Electronic sealing devices 22

5 Meter classification 23
5.1 Meter pressure classes 23
5.1.1 Admissible water pressure 23
5.1.2 Internal pressure 23
5.1.3 Concentric meters 24
5.2 Meter temperature classes 24
5.3 Flow profile sensitivity classes 24
5.4 Pressure loss 25

6 Marking 26

7 Metrological characteristics 27
7.1 Permanent flowrate (Q3) 27
7.2 Measuring range 27
7.3 Relationship between permanent flowrate (Q3) and overload flowrate (Q4) 28
7.4 The relationship between transitional flowrate (Q2) and minimum flowrate (Q1) 28

7.5 Reference flowrate ... 28
7.6 Maximum permissible error ... 28
7.6.1 Sign of the error ... 28
7.6.2 Relative error, ... 28
7.6.3 MPE lower flow range ... 28
7.6.4 MPE upper flow range ... 29
7.6.5 Maximum permissible errors in service ... 29
7.6.6 Absence of flow ... 29
7.7 Meters with subassemblies ... 29

8 Meter performance requirements ... 30
8.1 Measurement error tests ... 30
8.2 Pressure tests ... 30
8.3 Pressure loss tests ... 30
8.4 Overload temperature tests ... 30
8.5 Climatic and mechanical environment ... 30
8.6 Electromagnetic environment ... 31
8.7 Static magnetic field ... 31
8.8 Endurance ... 32

9 Metrological control ... 32
9.1 Pattern approval ... 32
9.1.1 Extent of pattern approval ... 32
9.1.2 Objective of pattern approval ... 32
9.1.3 Number of meters to be tested ... 33
9.1.4 Test verdict ... 33
9.2 Initial verification ... 33
9.2.1 General ... 33
9.2.2 Static pressure test ... 33
9.2.3 Error (of indication) measurements ... 33
9.2.4 Water temperature of tests ... 34

Annex A (normative) Checking facilities ... 35

A.1 Action of checking facilities ... 35
A.2 Checking facilities for the measurement transducer ... 35
A.2.1 Pulse input solutions ... 35
A.2.2 Other technologies ... 36
A.3 Checking facilities for the calculator ... 36
A.3.1 Checking of correct functioning ... 36
A.3.2 Checking of the validity of calculations ... 37
A.4 Checking facility for the indicating device ... 37
A.4.1 First possibility ... 37
A.4.2 Second possibility ... 38
A.5 Checking facilities for ancillary devices ... 38
A.6 Checking facilities for the associated measuring instruments ... 38

Annex B (normative) In-line meter dimensions (including alternative lengths) ... 39

Annex C (informative) Table of rated operating, limiting and references conditions ... 42

Annex D (informative) Test program ... 44

Annex ZA (informative) !!!!Relationship between this European Standard and the Essential Requirements of EU Directive 22/2004/EC on Measuring Instruments ... 45

Bibliography ... 55
