ISO 7902-2:2020 (E)

Hydrodynamic plain journal bearings under steady-state conditions — Circular cylindrical bearings — Part 2: Functions used in the calculation procedure

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Tables of basic bearing characteristics

5 Graphs of basic bearing characteristics

6 Friction power loss

7 Lubricant flow rate resulting from feed pressure

- 7.1 General
- 7.2 Lubrication hole located opposite to direction of load
- 7.3 Lubrication hole located at 90° to direction of load
- 7.4 Lubrication holes located at 90° to direction of load
- 7.5 Circumferential groove (full groove)
- 7.6 Circumferential groove (partial groove)
- 7.7 Lubrication pocket, located opposite to direction of load
- 7.8 Lubrication pocket located at 90° to direction of application load
- 7.9 Two lubrication pockets at ±90° to direction of load

8 Effective dynamic viscosity, ηeff, of the lubricant as a function of effective bearing temperature, Teff
