Rolling bearings - Measuring methods for vibration - Part 1: Fundamentals

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Fundamental concepts	3
4.1	Bearing vibration measurement	3
4.2	Characteristics of an axis of rotation	3
4.3	Bearing error motion	4
4.4	Bearing vibration	5
5	Measurement process	6
5.1	Basis of measurement	6
5.2	Speed of rotation	6
5.3	Orientation of bearing rotational axis	6
5.4	Bearing load	6
5.5	Transducers	6
6	Measurement and evaluation methods	7
6.1	Physical quantity measured	7
6.2	Frequency domain	7
6.3	Time domain	7
6.4	Transducer response and filter characteristics	8
6.5	Method of time-averaging	9
6.6	Testing sequence	10
7	Conditions for measurement	10
7.1	Bearing conditions for measurement	10
7.2	Conditions of the test environment	10
7.3	Conditions for the test device	11
7.4	Requirements for the operator	11
8	Calibration and reference evaluation of measuring system	11
8.1	General	11
8.2	Calibration of system components	11
8.3	System performance evaluation	12
Annex A (informative) Contact resonance considerations		13
Bibliography		14
