ISO/TR 13086-4:2019 (E)

Gas cylinders — Guidance for design of composite cylinders — Part 4: Cyclic fatigue of fibres and liners

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Background

5 Cyclic fatigue evaluation

6 Elements of cyclic fatigue

- 6.1 Service conditions and requirements
- 6.1.1 Temperature and moisture
- 6.1.2 Pressure
- 6.1.3 Pressure cycles
- 6.2 Test conditions and specimens
- 6.3 Fibre materials and their fatigue properties
- 6.3.1 Materials
- 6.3.2 Material properties and data
- 6.3.3 Hybrid construction
- 6.4 Liner materials and their fatigue properties
- 6.4.1 Materials used
- 6.4.2 Material properties and data
- 6.4.3 Issues with localized strain differences
- 6.5 Resin materials and their fatigue properties
- 6.6 Composite/liner load sharing
- 6.7 Autofrettage
- 6.8 Analysis methods
- 6.9 Leak before burst (LBB)
- 6.10 Damage tolerance
- 6.11 Aging and environment
- 6.12 Counting cycles
- 6.13 Combining cycles
- 6.14 Qualification testing

7 Summary and conclusions

Annex A (informative) Equivalent pressure cycling

- A.1 Purpose
- A.2 Developing an S-N diagram
- A.3 Equivalent pressure cycling
- A.4 Developing a Goodman diagram
