## Elastomeric seismic-protection isolators - Part 3: Applications for buildings - Specifications

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1 <b>Scope</b> .....		1
2 <b>Normative references</b> .....		1
3 <b>Terms and definitions</b> .....		1
4 <b>Symbols</b> .....		4
5 <b>Classification</b> .....		7
6 <b>Requirements</b> .....		9
7 <b>Design rules</b> .....		20
8 <b>Manufacturing tolerances</b> .....		25
9 <b>Marking and labelling</b> .....		31
10 <b>Test methods</b> .....		32
11 <b>Quality assurance</b> .....		32
<b>Annex A (normative) Tensile stress in reinforcing steel plate</b> .....		33
<b>Annex B (informative) Determination of ultimate property diagram based on experimental results</b> ...		35
<b>Annex C (informative) Minimum recommended physical properties of rubber material</b> .....		38
<b>Annex D (informative) Effect of inner-hole diameter and second shape factor on shear properties</b> ...		39
<b>Annex E (informative) Determination of compressive properties of elastomeric isolators</b> .....		42
<b>Annex F (informative) Determination of shear properties of elastomeric isolators</b> .....		45
<b>Annex G (informative) Method of predicting buckling limit at large deformations</b> .....		50
<b>Annex H (informative) Design of fixing bolts and flanges</b> .....		57
<b>Bibliography</b> .....		60
