DIN EN 1058:2010-04 (E)

Wood-based panels - Determination of characteristic 5-percentile values and characteristic mean values

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Symbols 5

5 Reference population 5

6 Determination of characteristic values of mechanical and physical properties 5
6.1 Sampling 5
6.2 Testing 6
6.3 Analysis of data 6
6.3.1 General 6
6.3.2 Strength and stiffness properties 6
6.3.3 Characteristic mean value (50-percentile characteristic value) 6

7 Test report 6

Annex A (informative) Calculation of the 5-percentile characteristic value of log-normal distributed test data according to EN 14358 7

A.1 Symbols 7
A.1.1 Letter symbols 7
A.1.2 Indices 7
A.2 Analysis of data 8
A.2.1 Characteristic value km of test data with unknown coefficient of variation 8
A.2.2 Characteristic value km of test data with known coefficient of variation 8
A.3 Acceptance criteria for a sample 9
A.4 Examples of calculation 9
A.4.1 Determination of the characteristic value of the modulus of bending 05f of particle boards with unknown coefficient of variation: 9
A.4.2 Determination of the characteristic value of the modulus of bending 05f of particle boards with known coefficient of variation: 11

Annex B (normative) Calculation of the characteristic mean value (50-percentile value) of normal distributed test data 13

B.1 Symbols 13
B.1.1 Letter symbols (see appendix A) 13
B.1.2 Indices (see also appendix A) 13
B.2 Analysis of data 13
B.2.1 50-percentile characteristic values (characteristic mean values) 13
B.3 Acceptance criteria for a sample 14
B.4 Examples of calculation 14
B.4.1 Determination of the lower 50-percentile characteristic value (lower characteristic mean value) of the modulus of elasticity %50EL parallel to the production line of OSB of a normal distributed sample with unknown coefficient of variation 14

B.4.2 Determination of the upper 50-percentile characteristic value (upper characteristic mean value) of the density 50U of a normal distributed sample of particle boards with known coefficient of variation 16

Bibliography 17
