ISO 23045:2008-12 (E)

Building environment design - Guidelines to assess energy efficiency of new buildings

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Fundamentals on energy efficiency 2
4.1 General 2
4.2 Project information in relation to energy efficiency 2
4.3 Introducing the energy efficiency framework 4
4.4 Renewable energy integration 5

5 Expression of efficiency indicators 6
5.1 General 6
5.2 Indicators related to the performance of the building envelope 6
5.3 Indicators related to integrated energy performance of the building including systems 6
5.4 Secondary indicators 7

6 Design process 8
6.1 General 8
6.2 Stage I -- Conceptual design 8
6.3 Stage II -- Schematic design 8
6.4 Stage III -- Detail design 9
6.5 Stage IV -- Final design 10

7 Influential parameters 10
7.1 General 10
7.2 Building environment 10
7.3 Building characteristics 10
7.4 Building use 10
7.5 Calculation tools 10

8 Uses for energy performance indicators 11
8.1 General 11
8.2 Standard assets 11
8.3 Other parameters 11

Annex A (normative) Energy efficiency flowchart 12

Annex B (informative) Global basic energy scheme 13

Annex C (informative) Thermal load due to persons 14

Annex D (informative) Thermal load due to lighting 15

Annex E (informative) Thermal load due to equipment 16

Annex F (informative) Default net energy value for fuels 17

Bibliography 18
